Summary

Sandbox

App Sandboxing

App Sandboxing

Sandboxing your app is a great way to protect systems and users by limiting the privileges of an app to its intended functionality, increasing the difficulty for malicious software to compromise your users' systems

App Sandboxing

App Sandboxing

Sandboxing your app is a **great way to protect systems** and users by limiting the privileges of an app to its intended functionality, increasing the difficulty for malicious software to compromise your users' systems

App Sandboxing

App Sandboxing

Sandboxing your app is a great way to protect systems and users by limiting the privileges of an app to its intended functionality, increasing the difficulty for malicious software to compromise your users' systems

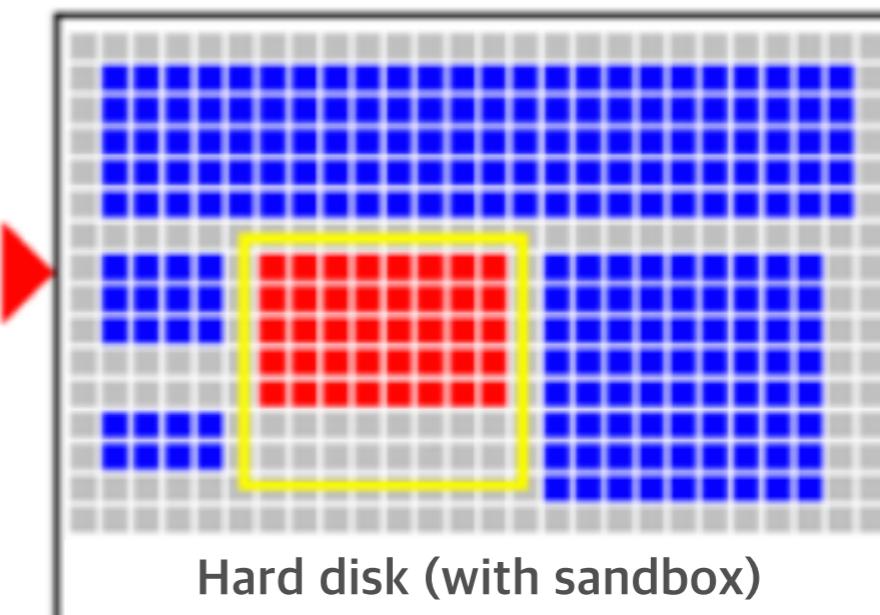

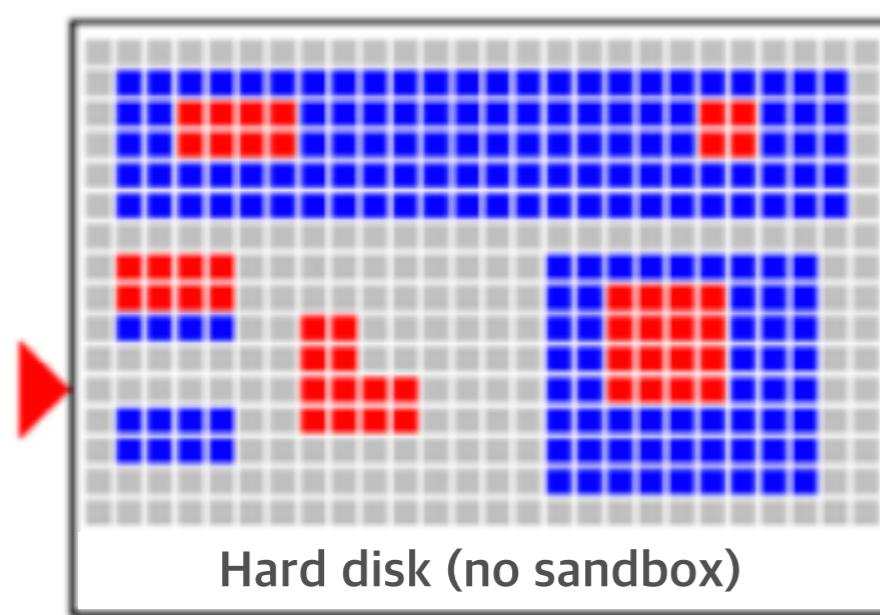

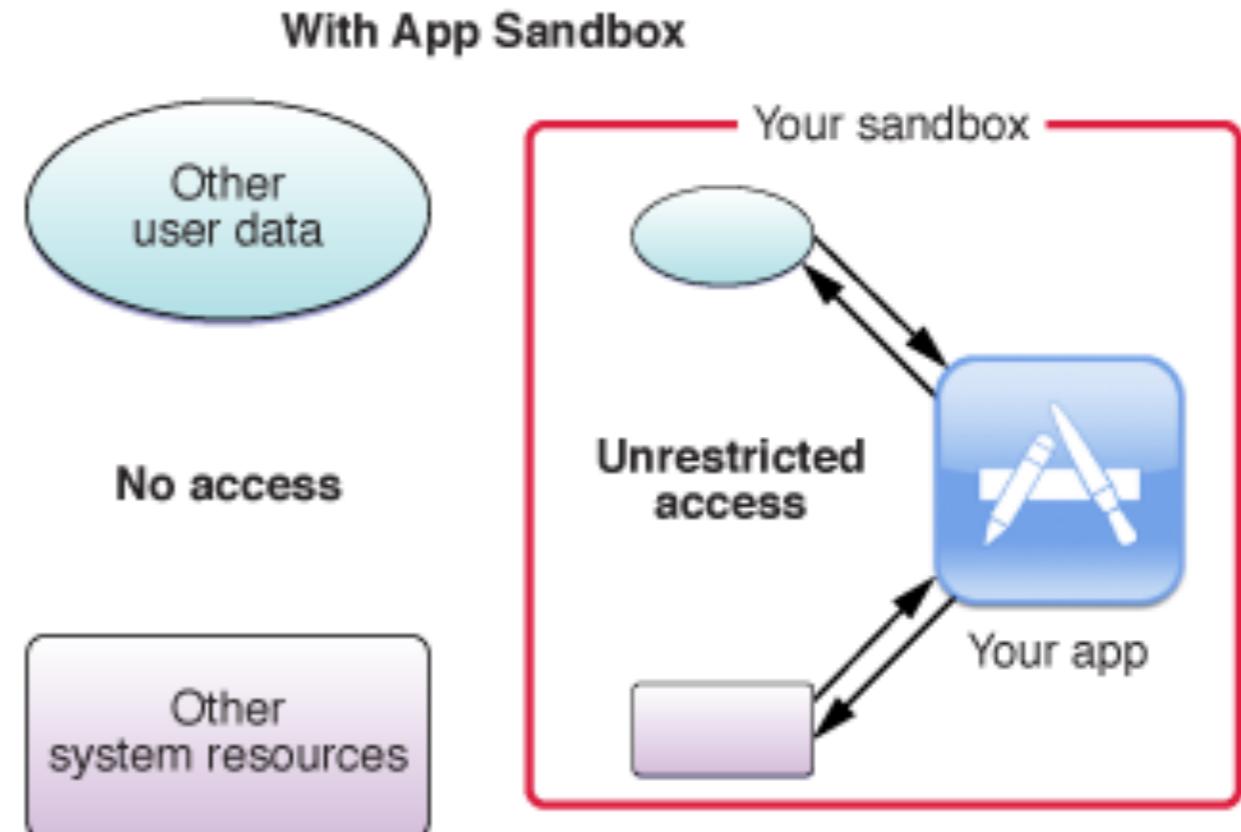

App Sandboxing

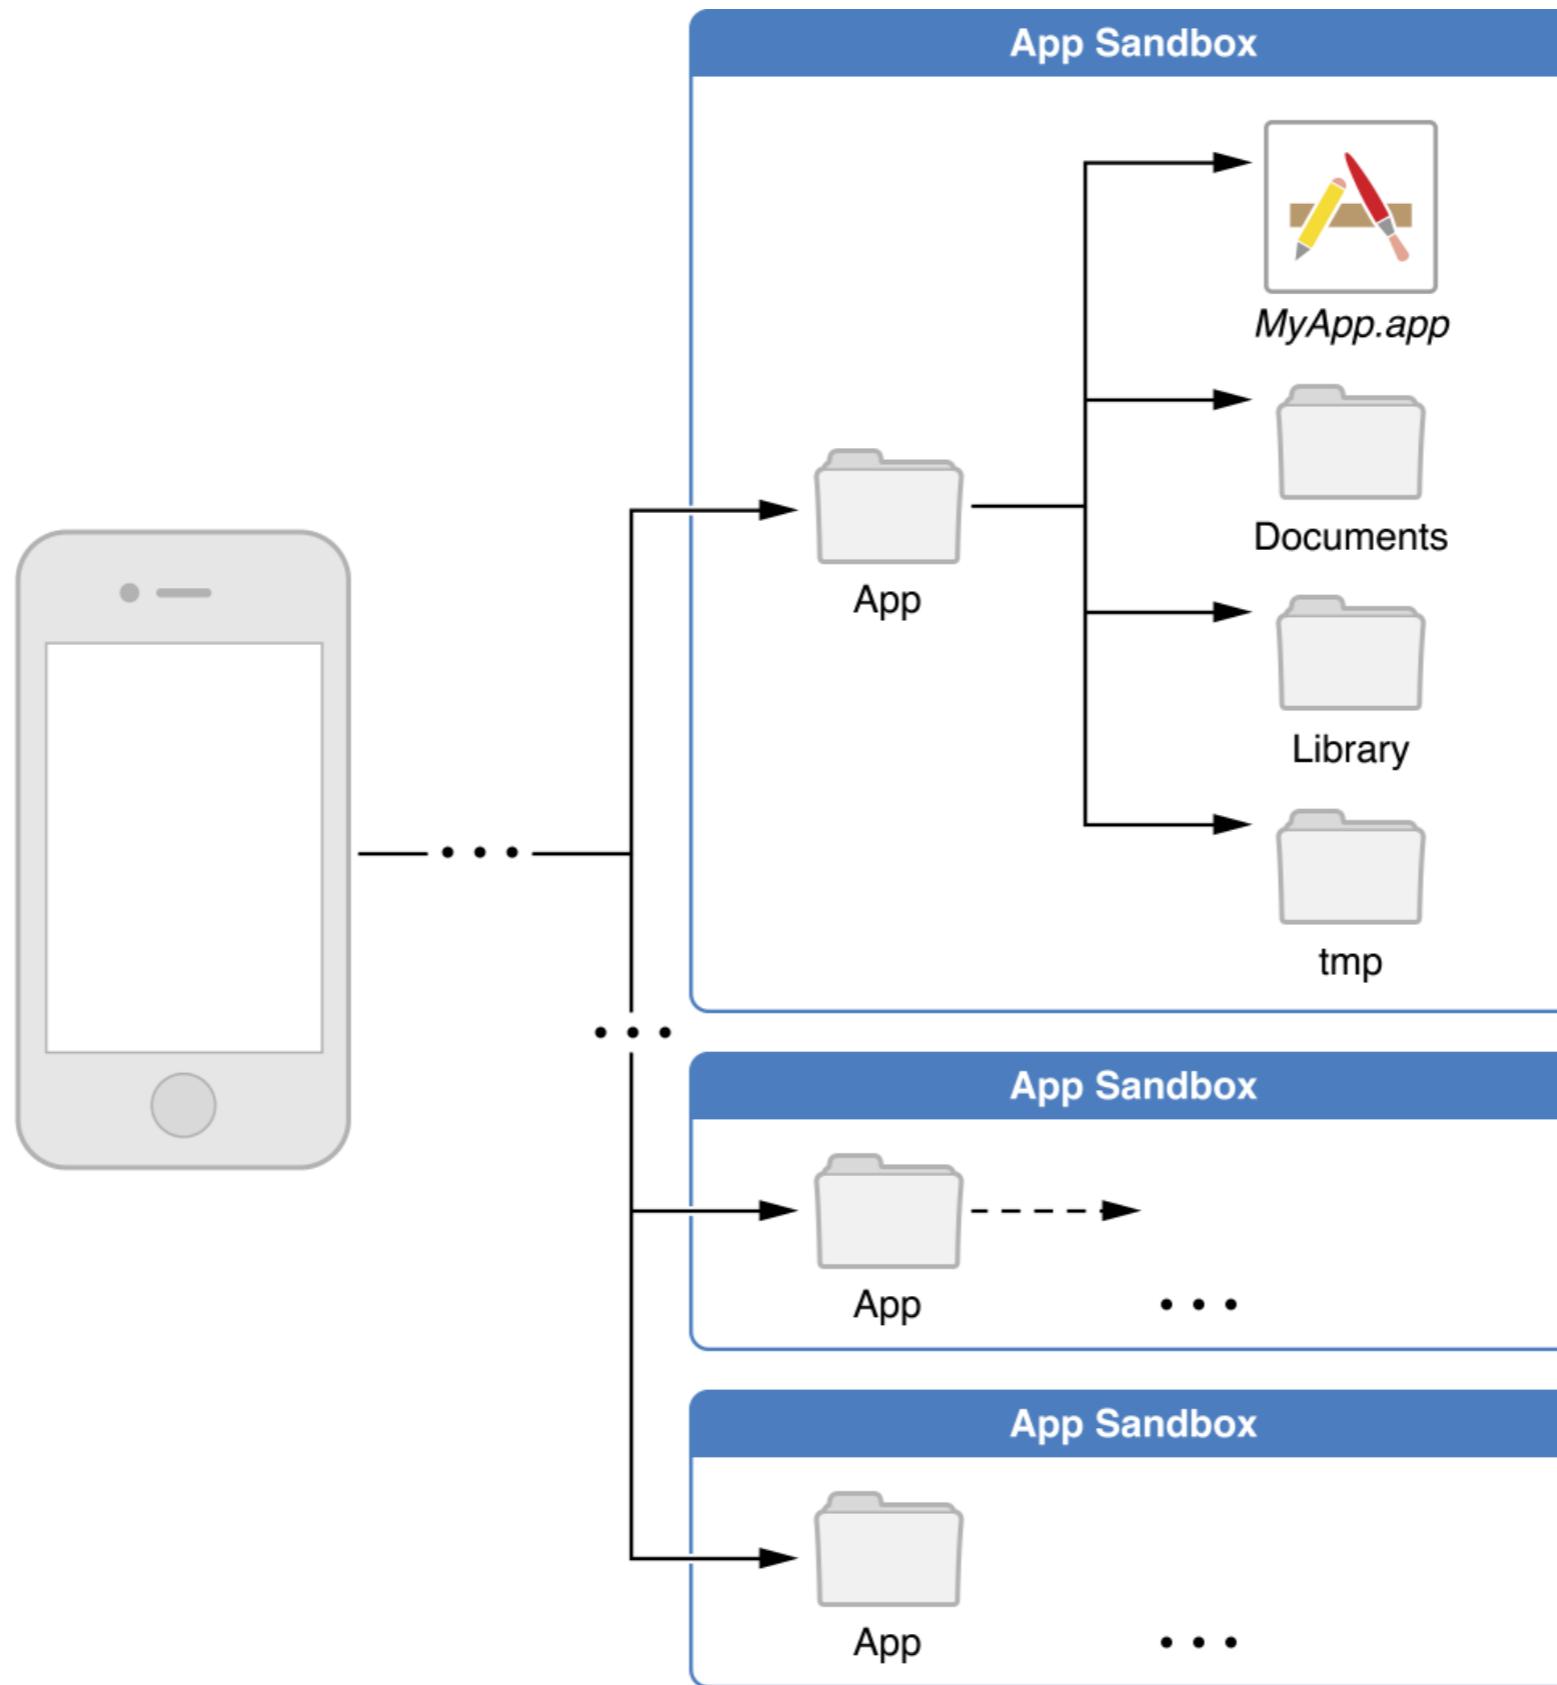

App Sandboxing

Sandboxing your app is a great way to protect systems and users by limiting the privileges of an app to its intended functionality, increasing the difficulty for malicious software to compromise your users' systems

Without vs With Sandbox

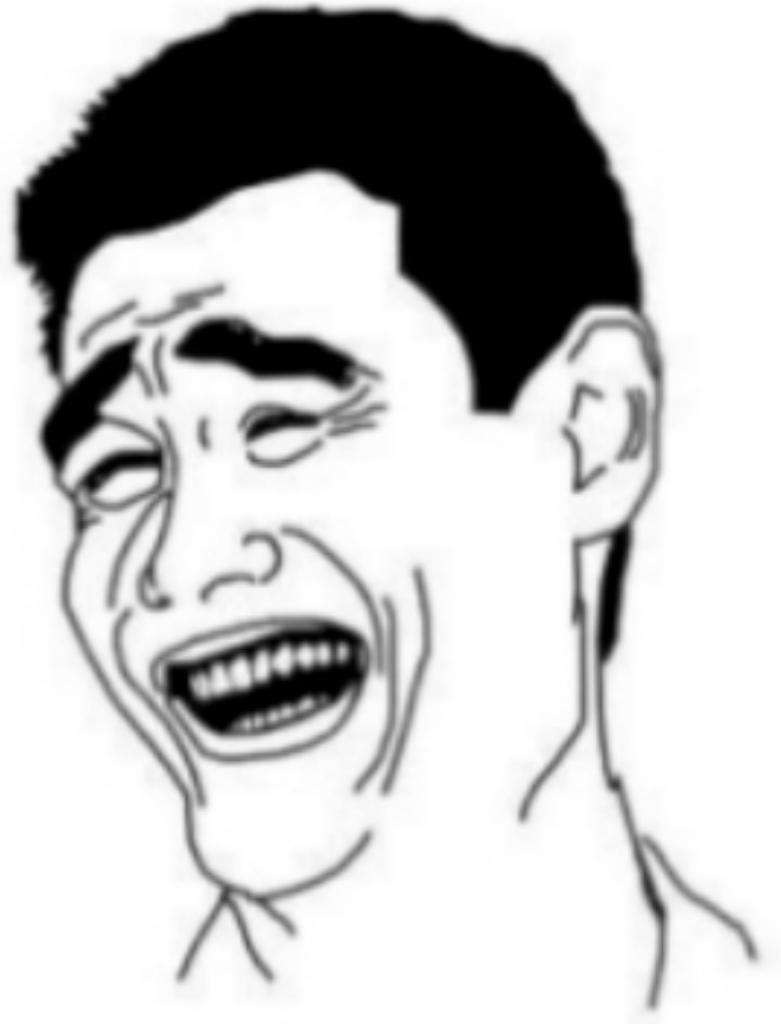

iOS App Sandboxes

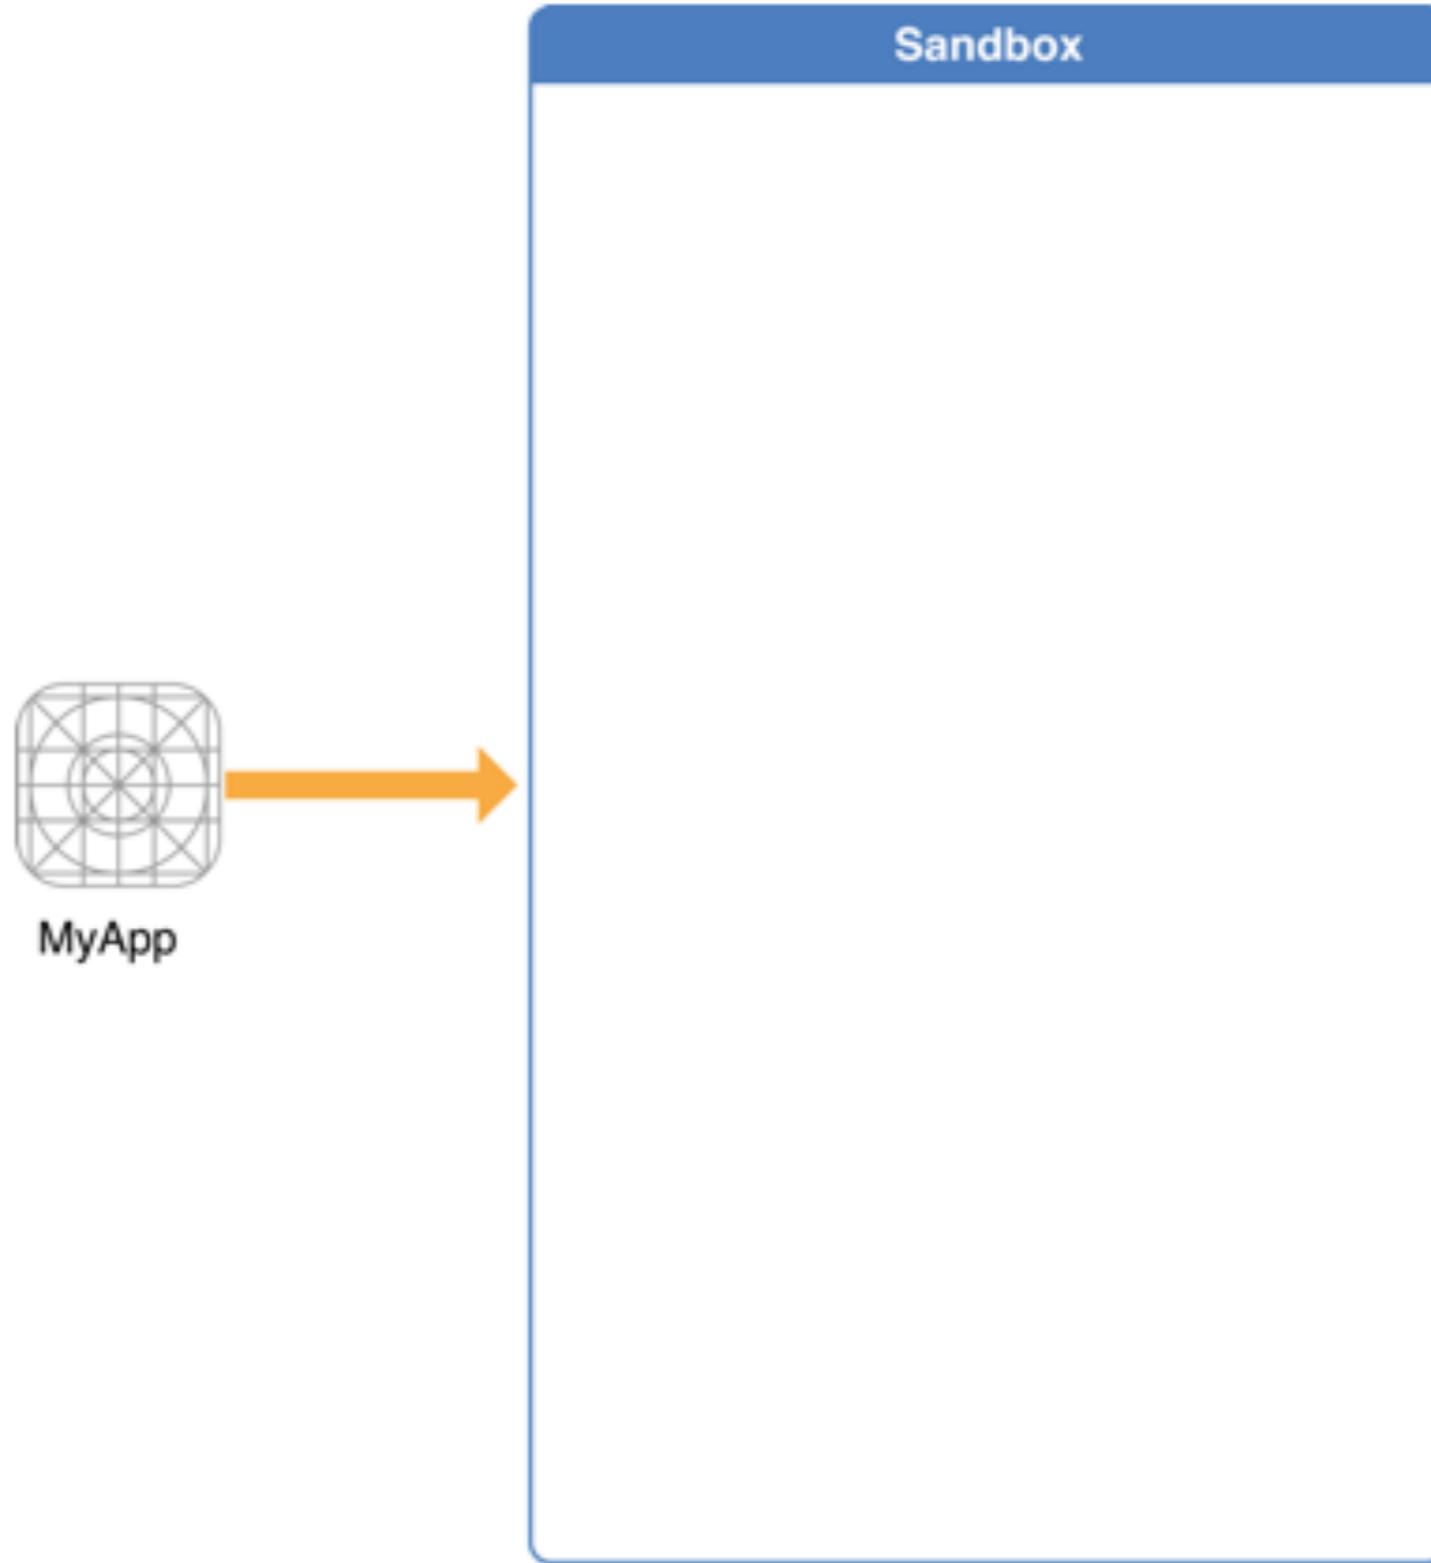

With Great Power Comes Great Responsibility

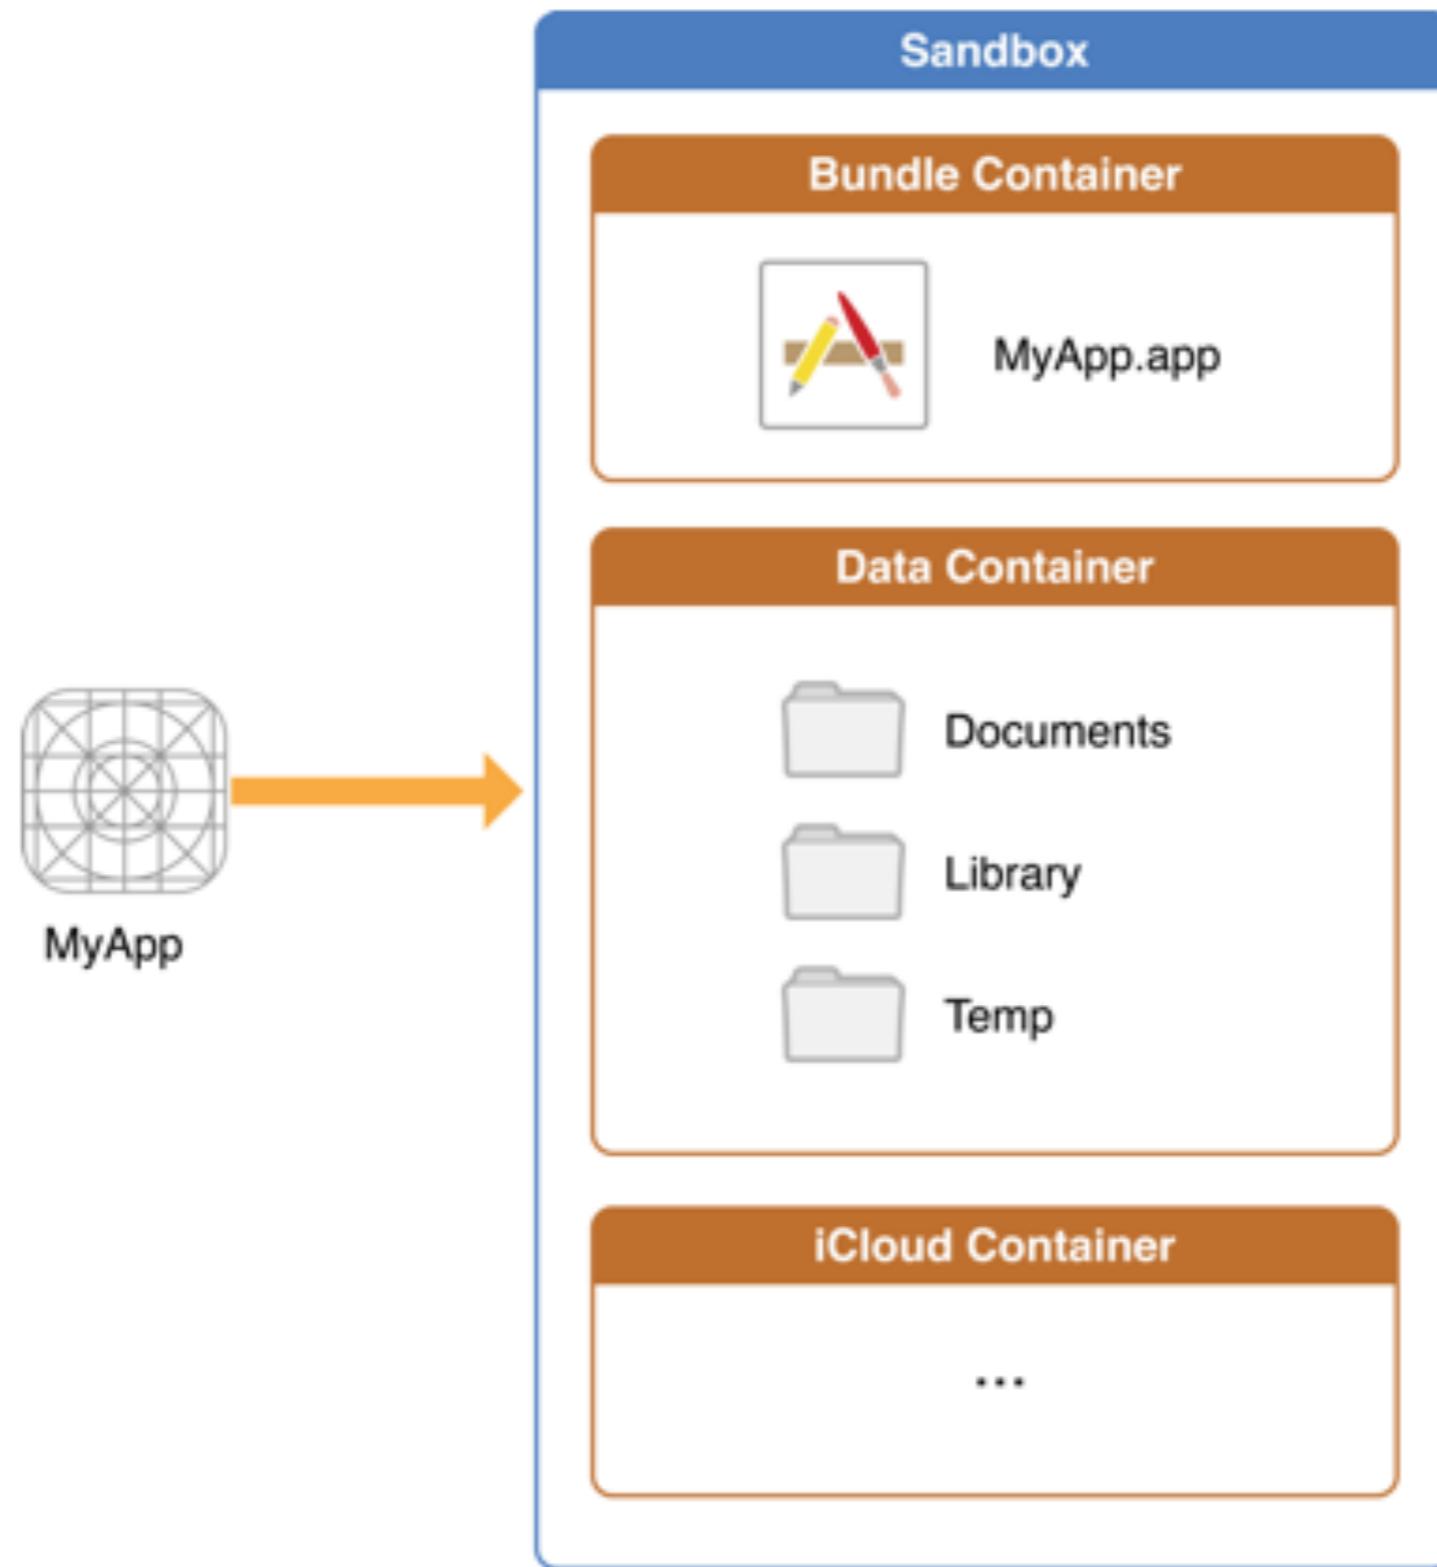

I've no great powers.
So there are no responsibilities

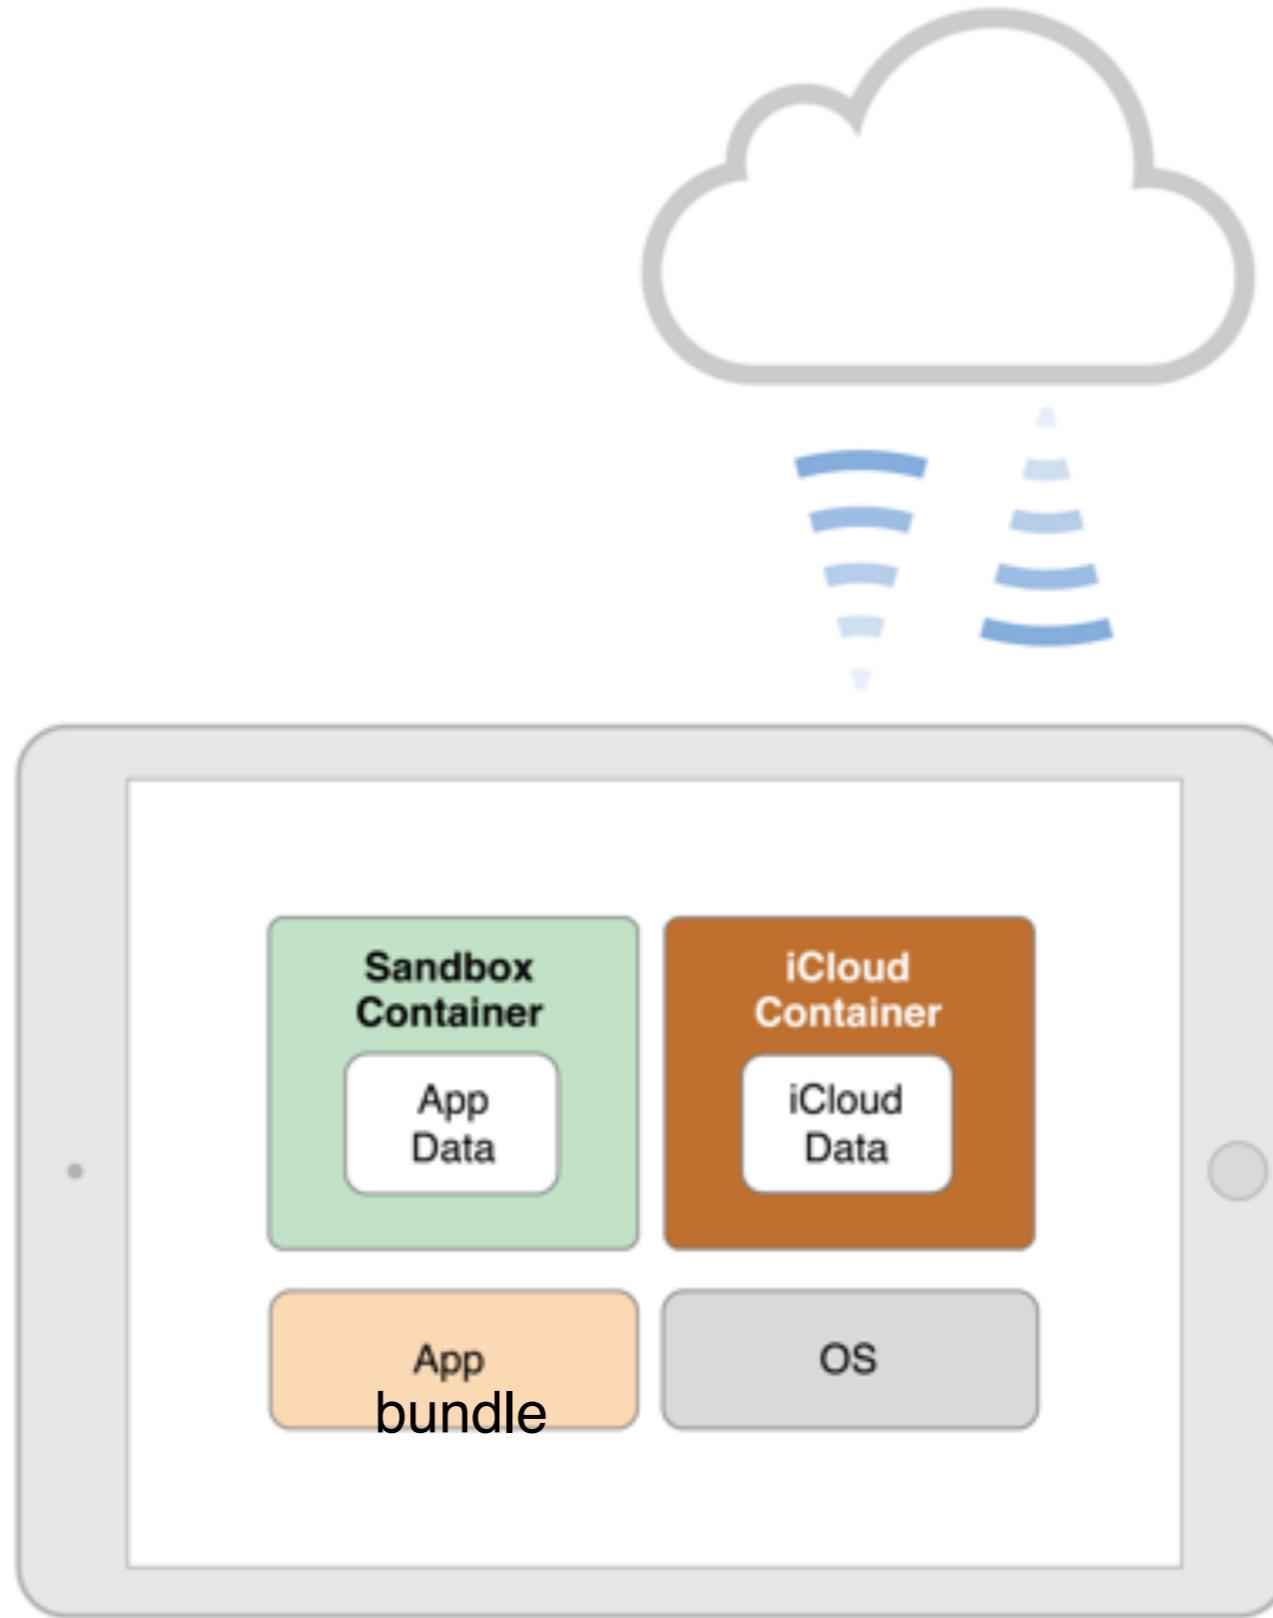

Sandbox Containers

Sandbox Containers

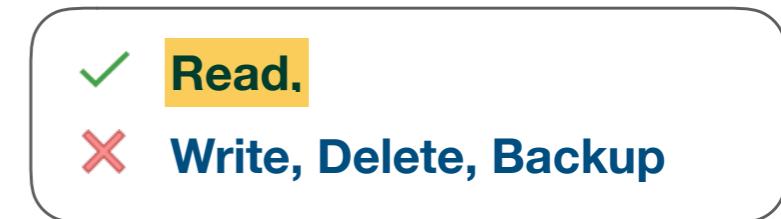

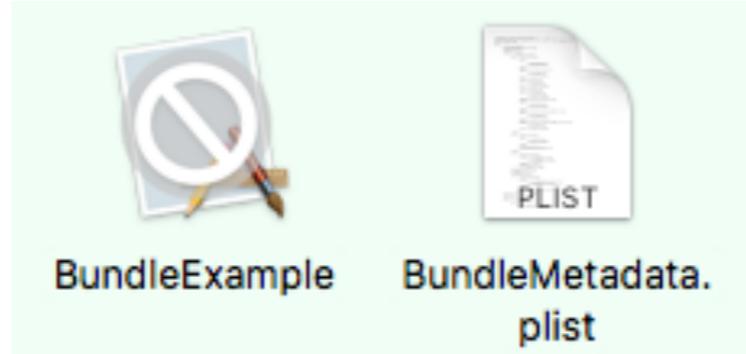

Sandbox Containers

Bundle

Bundle

Bundle.main.bundlePath

파일 시스템 내 하나의 디렉토리

실행 가능(Executable) 파일, Info.plist, 각종 Resources (이미지, 사운드, strings 등) 등을 함께 그룹화

Codesign Tool이 Signing을 위해 Bundle Container를 불러와 Code Seal 적용

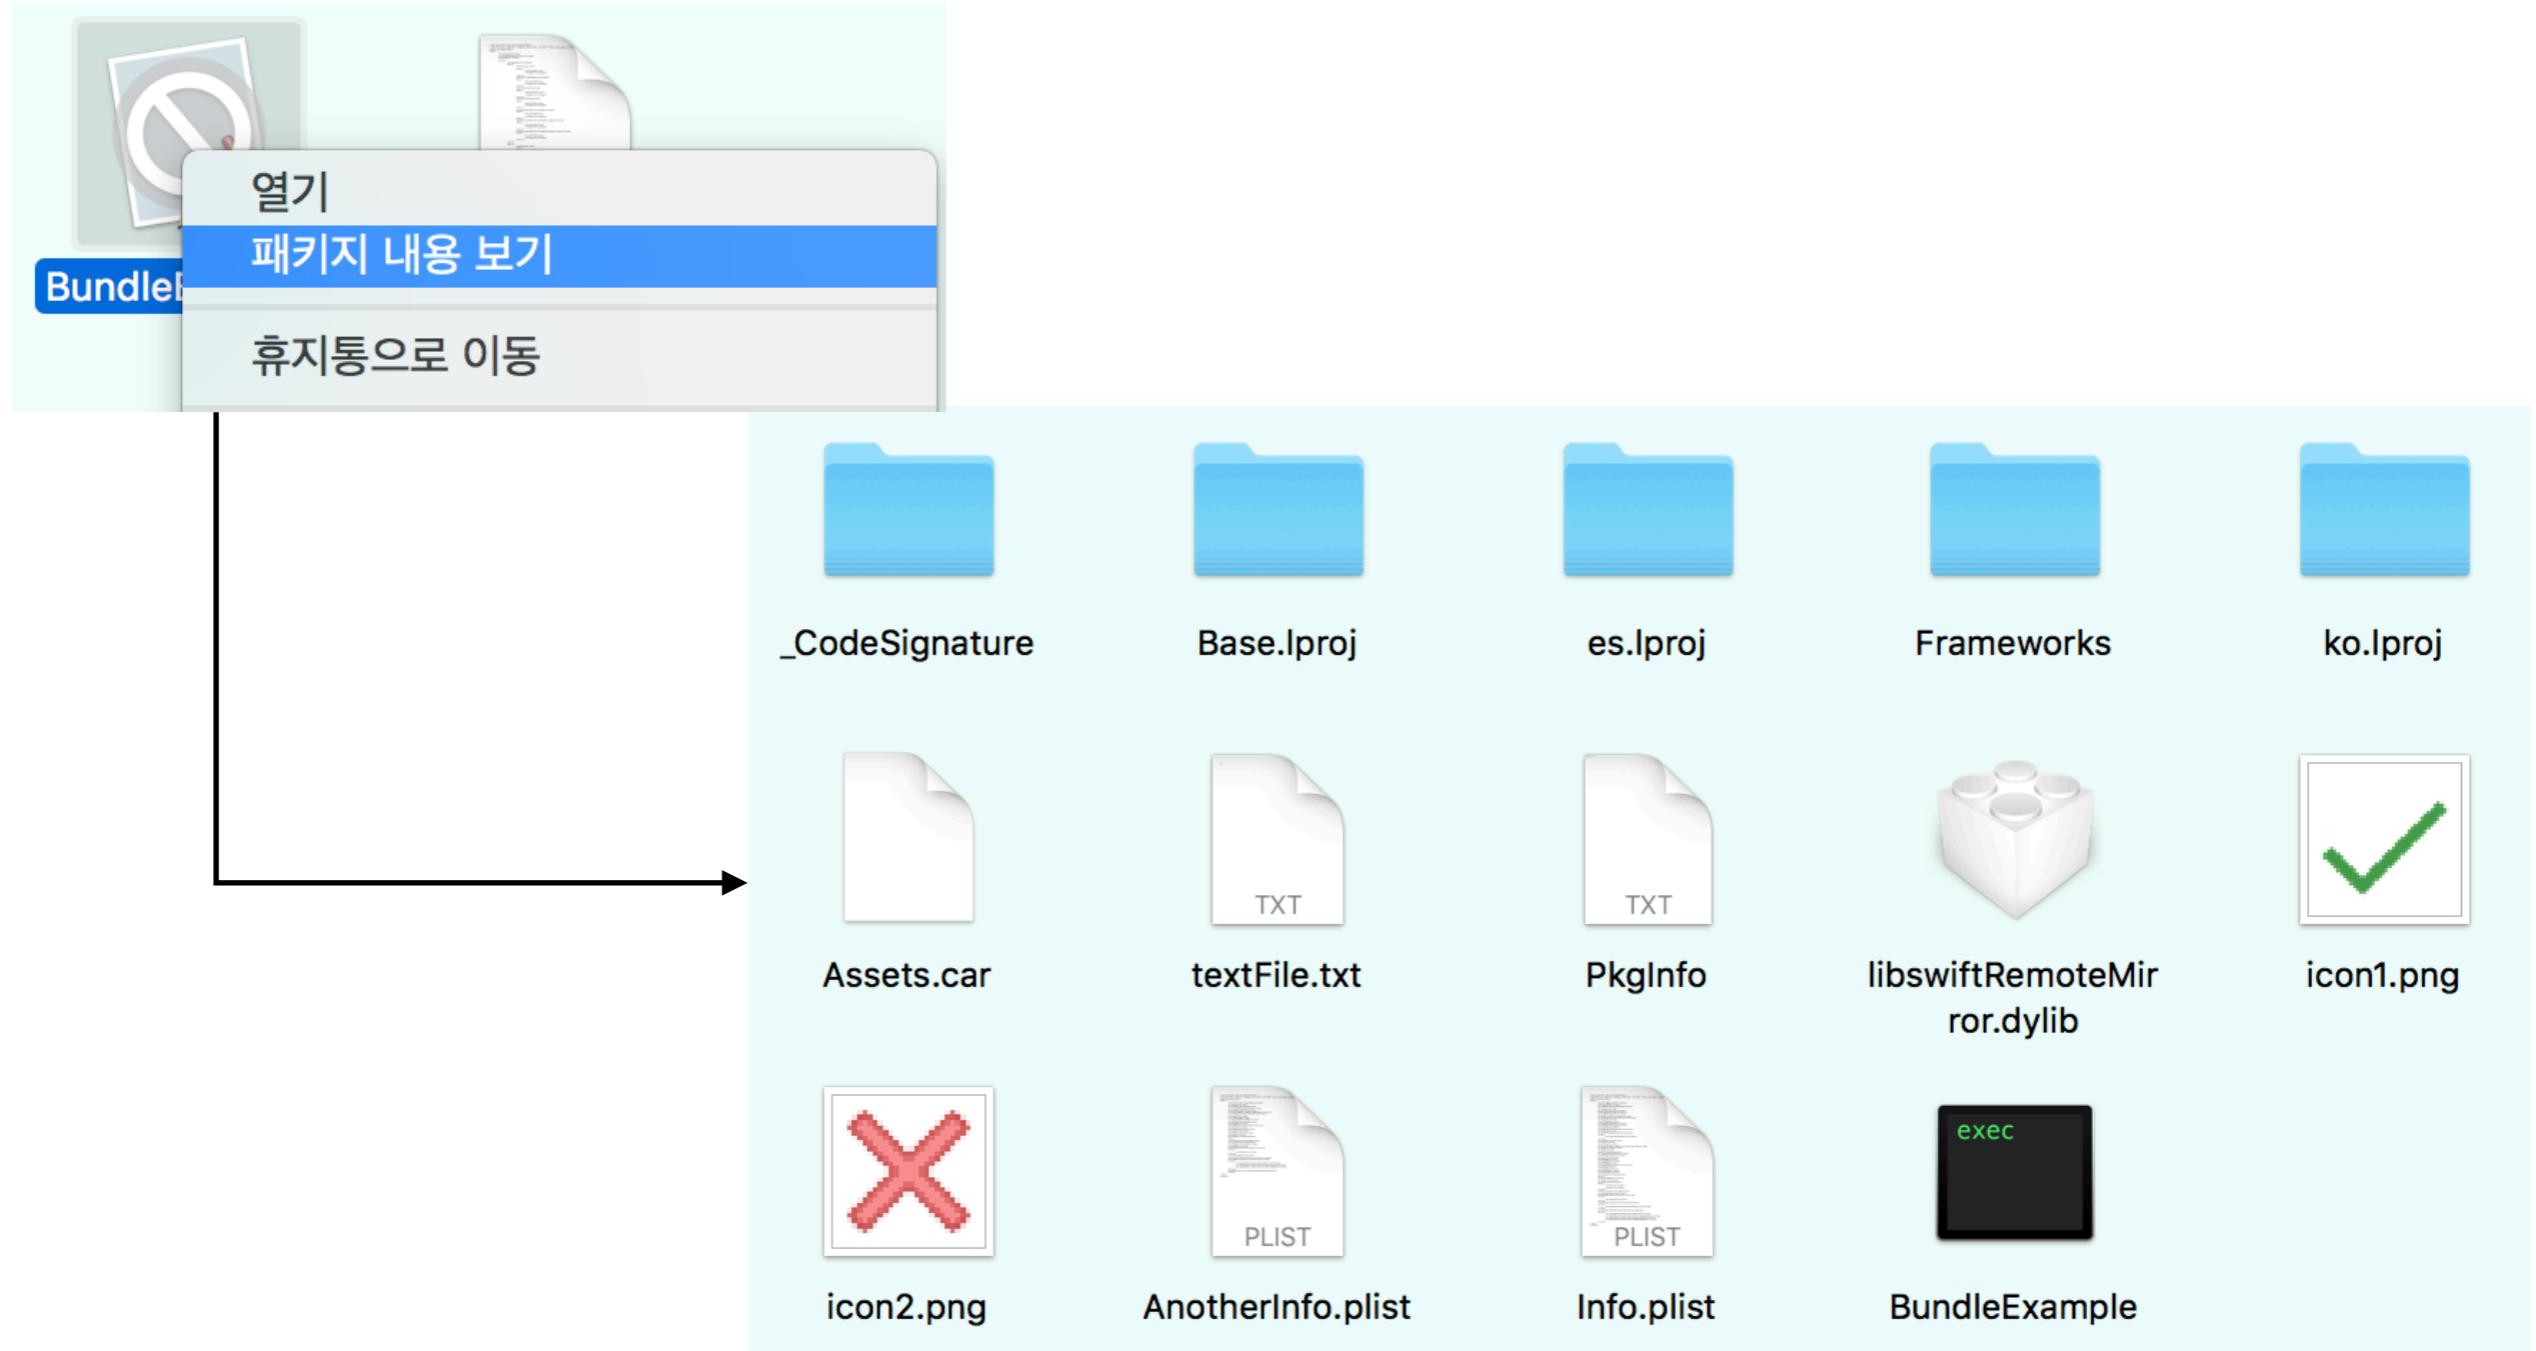

Static Library - Executable 파일에 통합 컴파일

Dynamic Library 및 Framework는 Frameworks 디렉토리에 존재

읽기 전용. 수정이 필요한 경우 데이터 컨테이너로 옮겨서 작업

iTunes, iCloud에 백업되지 않음

Assets

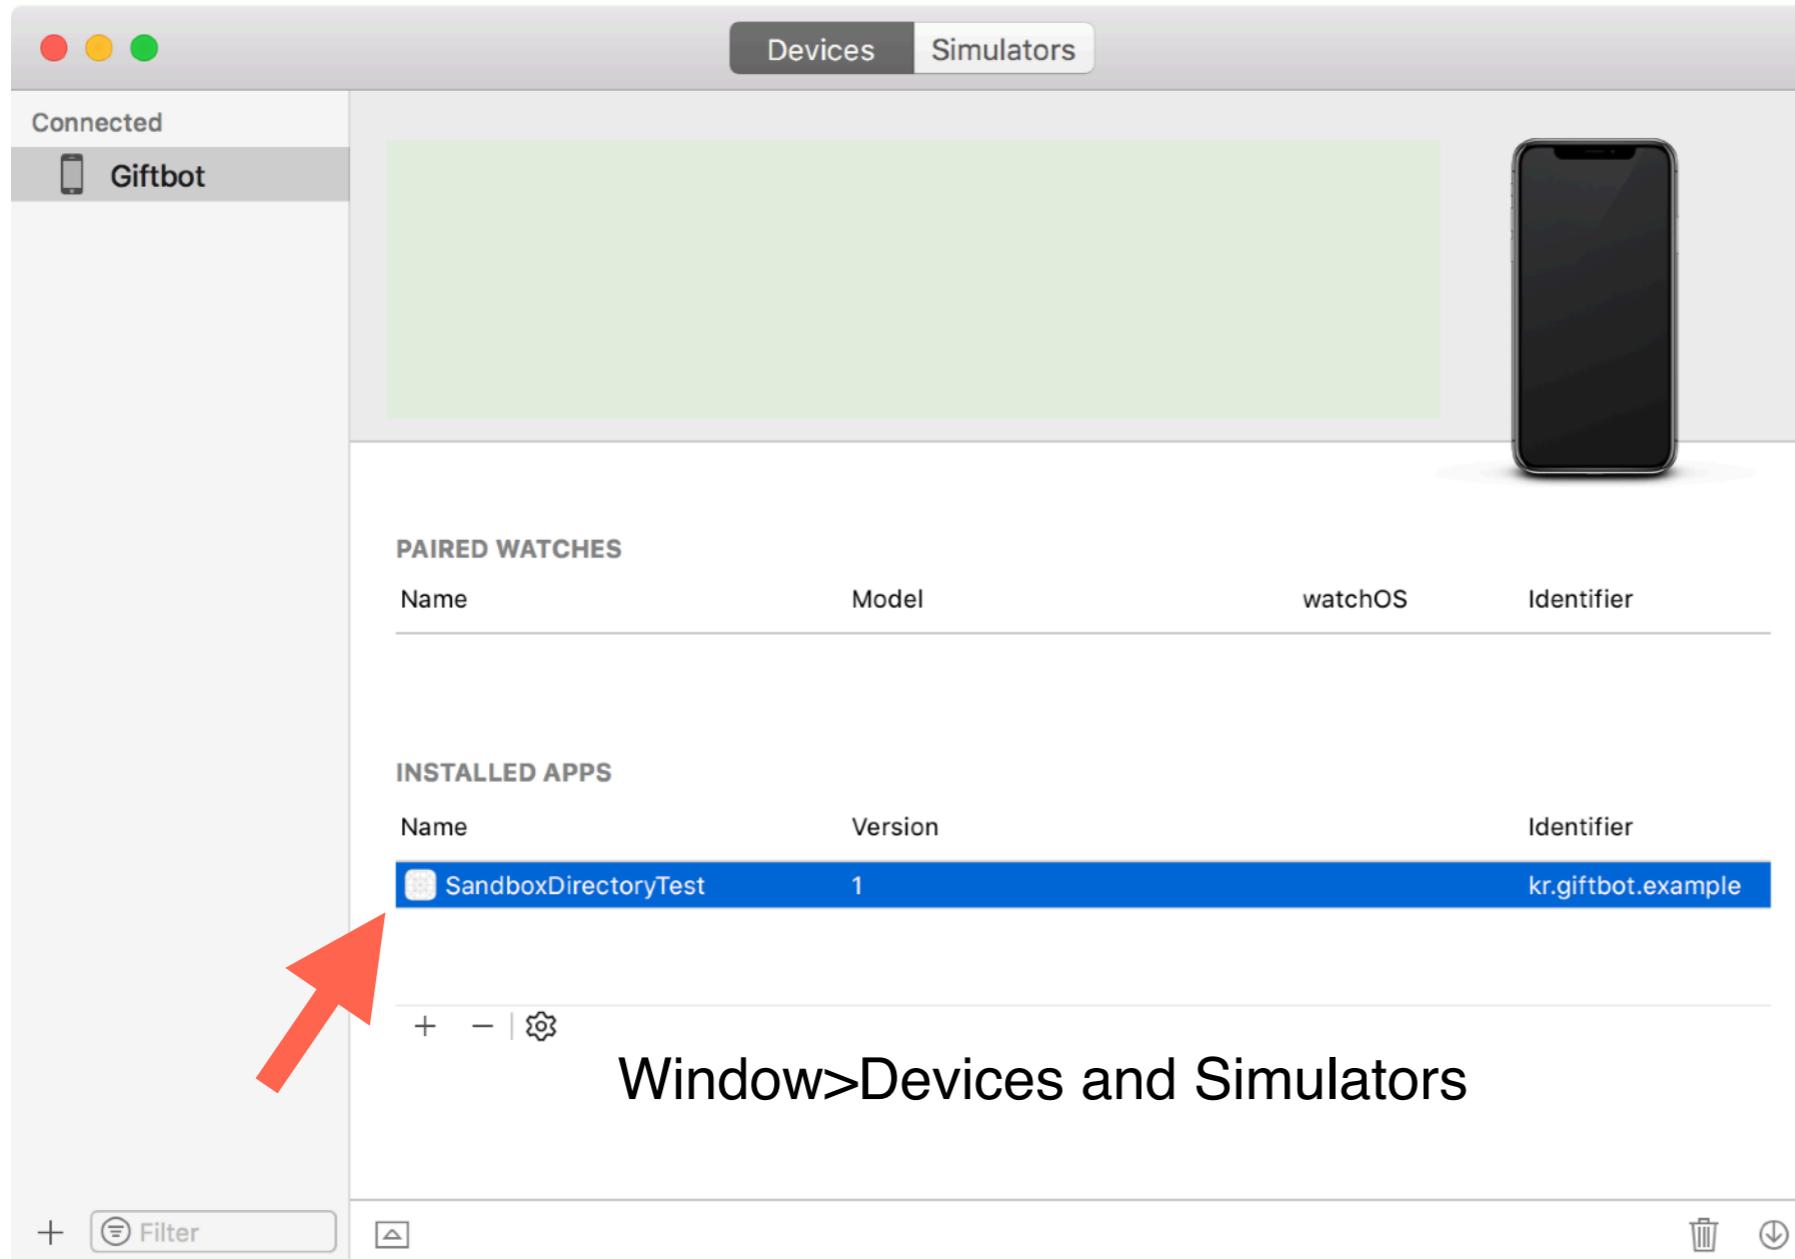

Static Frameworks

Source static frameworks is another powerful new feature of CocoaPods 1.4.0. For the first time, it is possible to distribute sources and build them into a static framework when `use_frameworks!` is specified in the `Podfile`. Because dynamic libraries cannot depend upon static libraries, it now becomes possible to distribute pods that depend upon other static library frameworks, including the many static frameworks that are released as `vendored_frameworks` today.

Data Container

NSHomeDirectory()

Data Container 홈 디렉토리

기본 디렉토리 - Documents, Library, tmp

사용자가 직접 디렉토리나 파일을 추가할 수 없으며 Documents 같은 서브디렉토리를 통해 관리

StoreKit 등 앱에서 사용하는 데이터에 따라 시스템이 그에 맞는 디렉토리 추가

iOS 11 부터 SystemData 디렉토리 추가 (읽기, 쓰기, 삭제 권한 모두 없음) - 현재 용도 불명확

Documents

✓ Read, Write, Backup

✗ Delete

[Directory]

✓ Read, Write, Delete, Backup

✗

[Files]

- `NSHomeDirectory() + "/Documents"`
- `FileManager.default.urls(for: .documentDirectory, in: .userDomainMask)[0]`
- `NSSearchPathForDirectoriesInDomains(.documentDirectory, .userDomainMask, true)[0]`

- 유저가 앱을 통해 생성한 문서나 데이터, 또는 외부 앱을 통해서 전송한 음악, pdf 등의 컨텐츠를 저장
- 설정에 따라 유저가 직접 파일 추가 및 삭제 가능

따라서 유저에 의해 삭제되거나 내용이 변경되어도 무방하고 유저가 다루는 컨텐츠와 관련이 있는 파일들만 저장

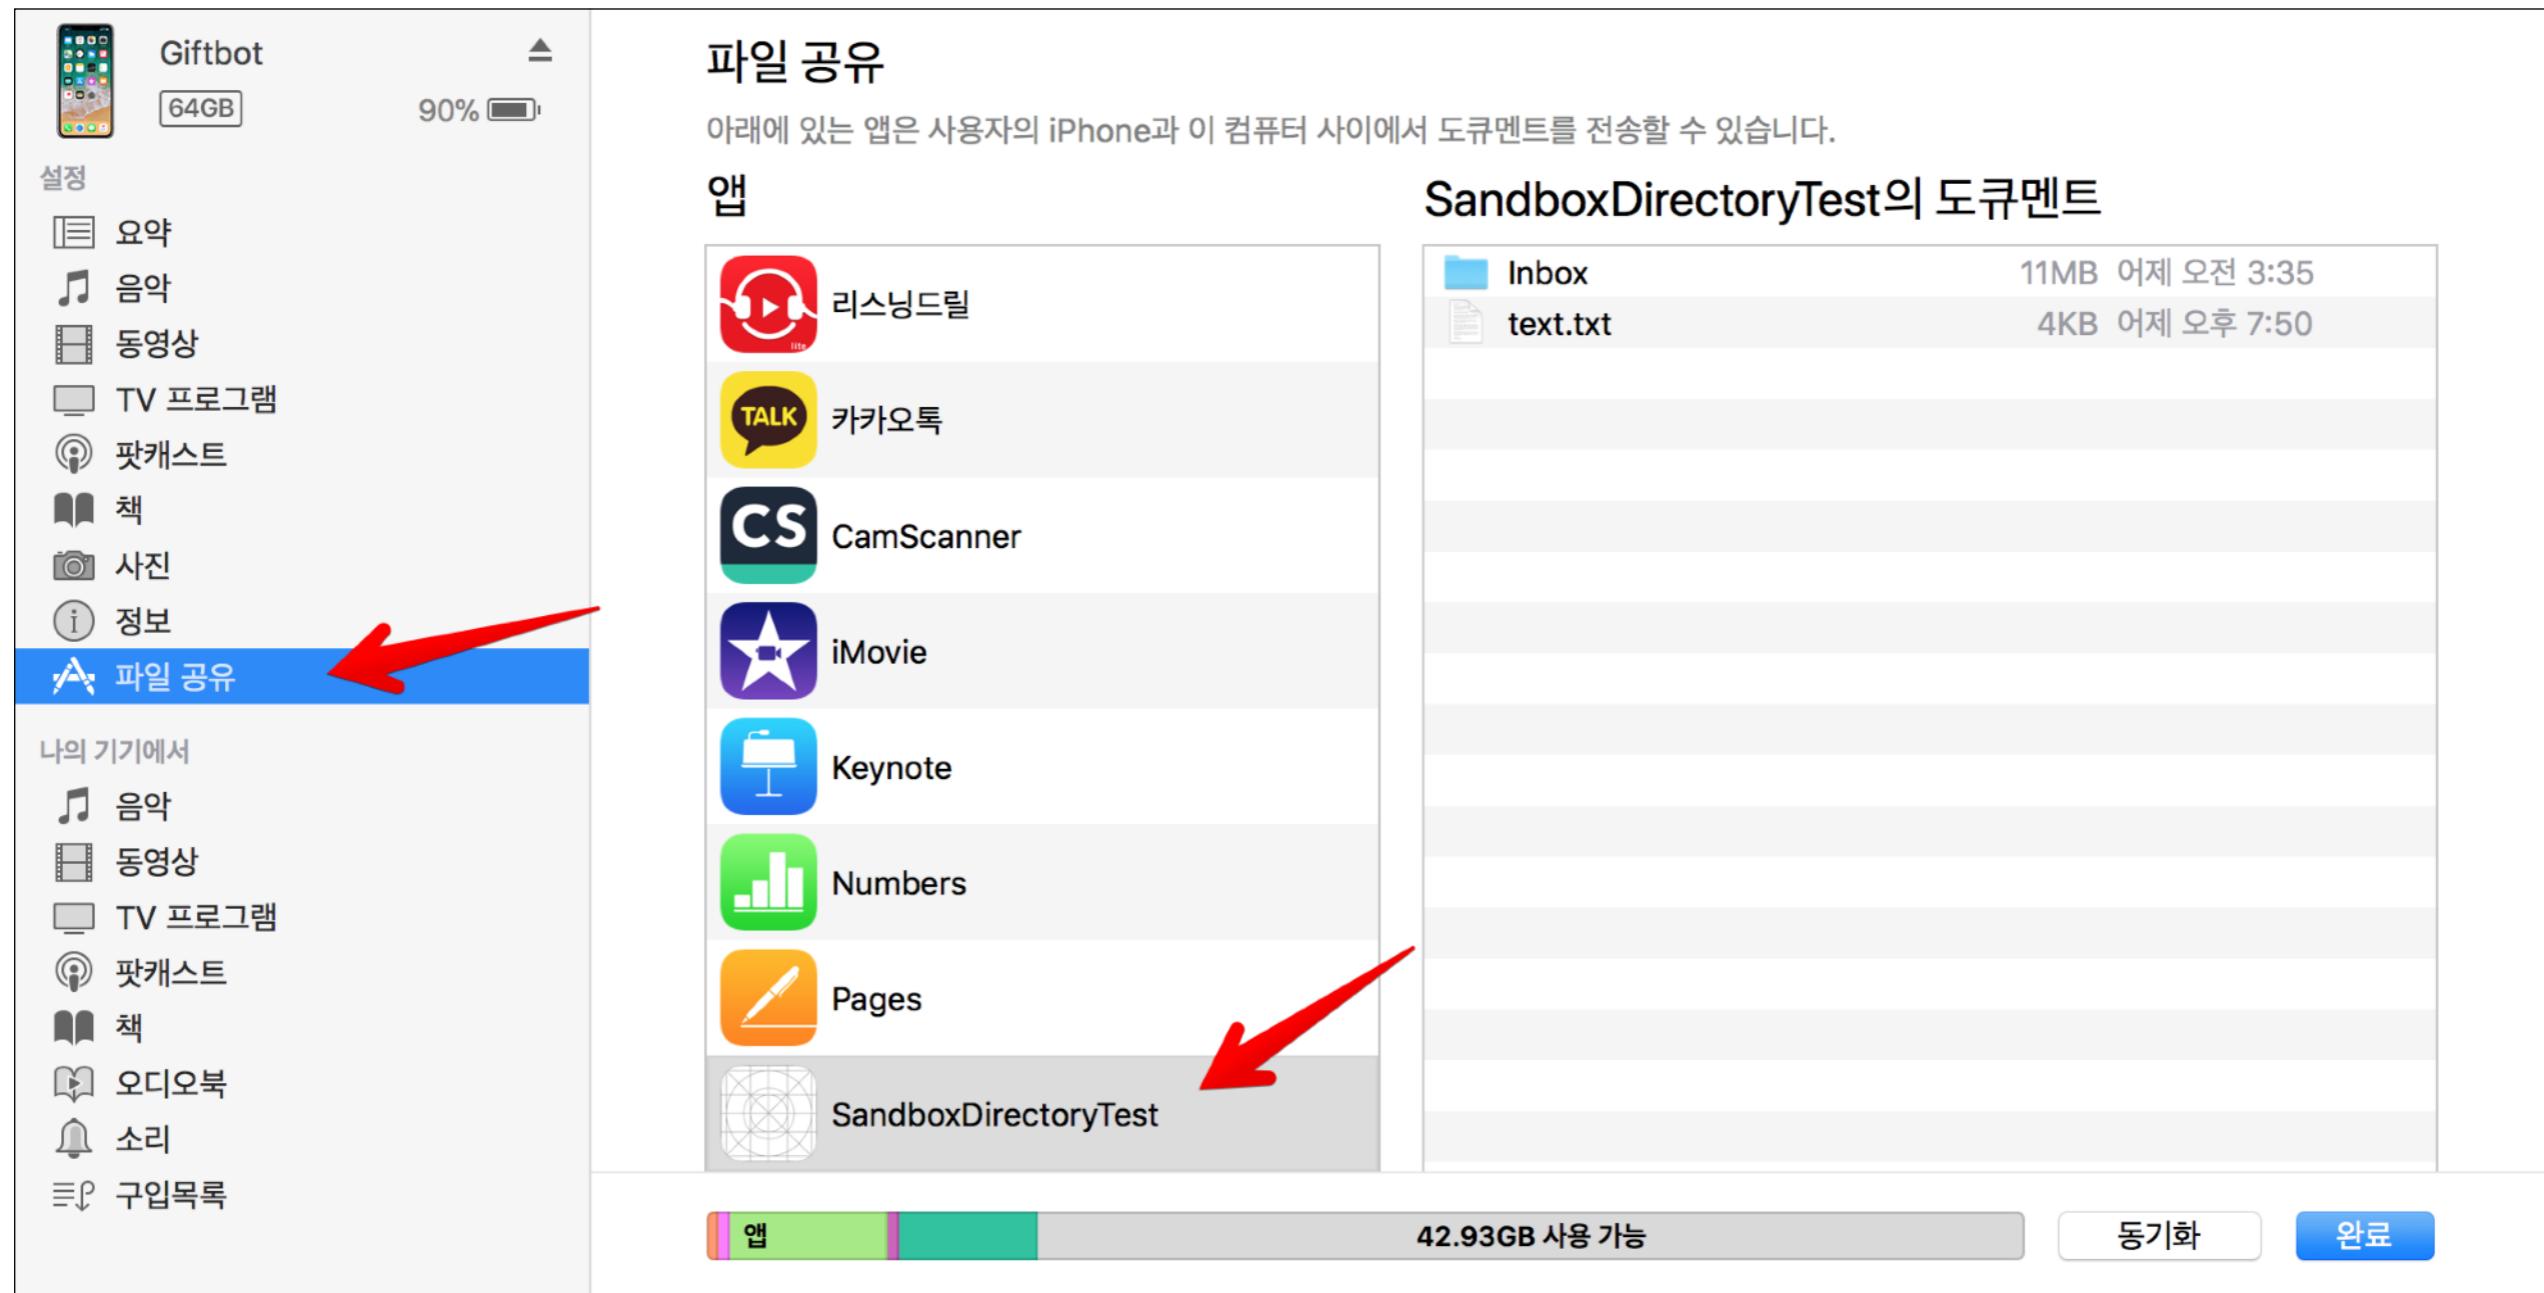

- Documents 디렉토리 자체는 삭제 불가

디렉토리 삭제 시도 시 Documents 내의 디렉토리, 파일들만 일괄 삭제

- iTunes, iCloud 에 백업

UIFileSharingEnabled

Information Property List	Dictionary (15 items)
Application supports iTunes file sharing	Boolean YES

The screenshot shows the iPhone Settings screen with the following details:

- Top Bar:** Shows the device name "Giftbot", storage "64GB", and battery level "90%".
- Left Side Navigation:** Includes sections for "설정" (Settings), "요약" (Summary), "음악" (Music), "동영상" (Videos), "TV 프로그램" (TV Shows), "팟캐스트" (Podcasts), "책" (Books), "사진" (Photos), "정보" (Information), and "파일 공유" (File Sharing). A red arrow points to the "파일 공유" section.
- Center Content:** A "파일 공유" (File Sharing) section with the text: "아래에 있는 앱은 사용자의 iPhone과 이 컴퓨터 사이에서 문서를 전송할 수 있습니다." (The following apps can send documents between your iPhone and this computer). It lists several apps: 리스닝드릴, 카카오톡, CamScanner, iMovie, Keynote, Numbers, Pages, and SandboxDirectoryTest. A red arrow points to the "SandboxDirectoryTest" app.
- Right Side Content:** A "SandboxDirectoryTest의 문서" (Documents of SandboxDirectoryTest) section showing two files: "Inbox" (11MB, modified 3:35 PM yesterday) and "text.txt" (4KB, modified 7:50 PM yesterday).
- Bottom Status Bar:** Shows "42.93GB 사용 가능" (42.93GB available), "동기화" (Sync), and "완료" (Done).

Documents/Inbox

✓ **Read, Backup**

✗ **Write, Delete**

[Directory]

✓ **Read, Delete, Backup**

✗ **Write**

[Files]

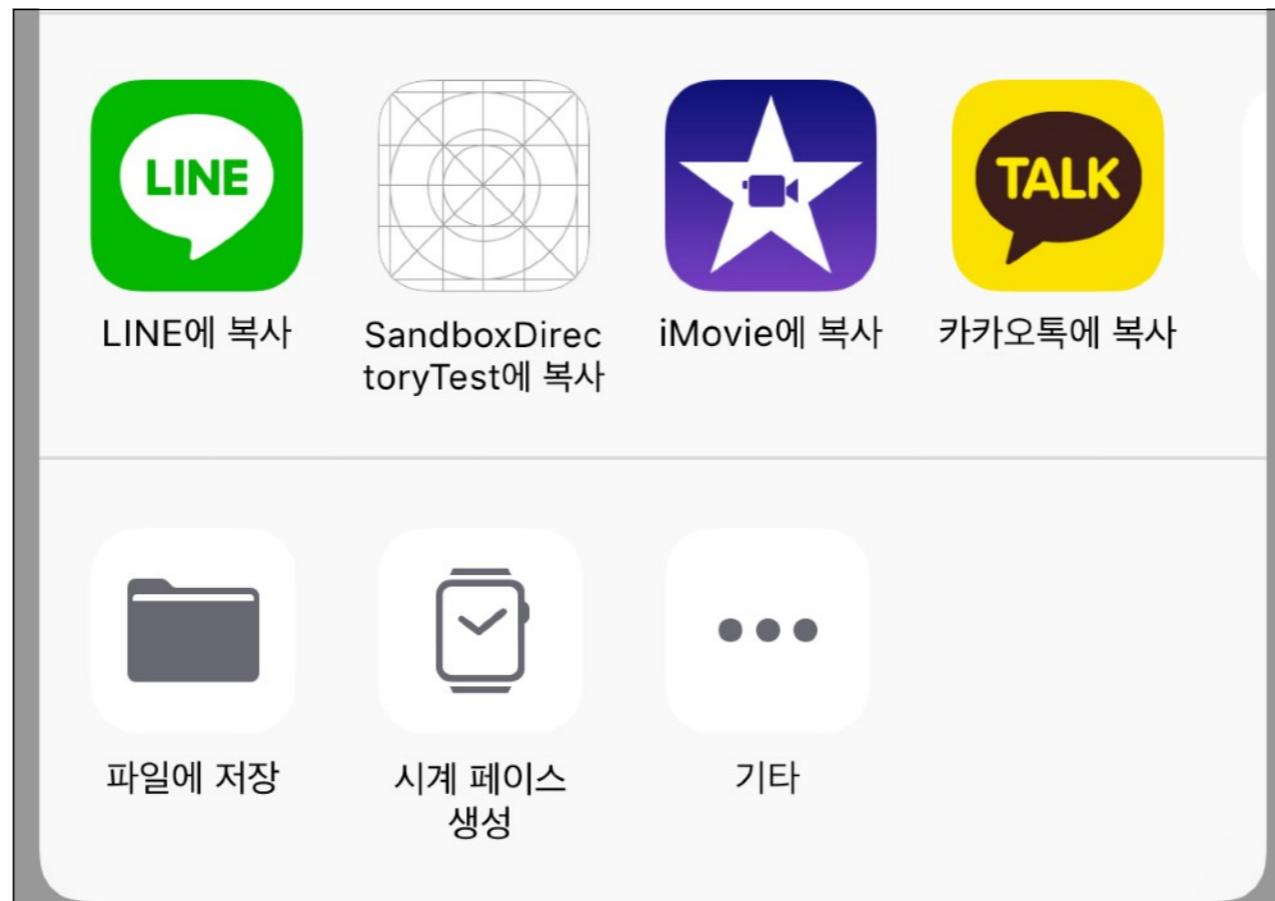

\$DocumentsPath + "Inbox"

- 타 앱을 통해 전송받은 파일이 저장되는 디렉토리 e.g.) 메일 앱 첨부파일 공유 등
- 파일들을 읽거나 삭제할 수는 있지만, 새 파일을 추가하거나 기존 파일 수정 불가
- 타 앱에서 동일 이름 파일 전달 시 덮어쓰기 대신 [file-1.txt, file-2.txt] 처럼 번호 자동 부여하며 새 파일 생성
- iOS 9.0 부터 디렉토리가 한 번 만들어진 이후로는 삭제 불가하며 파일만 삭제 가능. 유저가 직접 생성 불가

Documents 와 동일하게 디렉토리 삭제 시도 시 Inbox 내의 파일들만 일괄 삭제

Stingray May 30, 2017 at 2:00 AM 453 KB

Recents Browse

The screenshot shows the UIDocumentBrowserViewController interface. On the left, there is a sidebar with sections for 'Locations' (containing 'MyFileProvider', 'iCloud Drive', and 'On My iPad', with 'On My iPad' highlighted by a red box), 'Favorites' (with color-coded dots for Red, Orange, Yellow, Green, Blue, Purple, Gray, Work, and Home), and a 'Search' bar. The main content area has a title 'MyDocumentBrowser' and a 'Create Document' button. It displays a grid of documents and folders. Each item includes a thumbnail, the name, the creation date, and file size. The items are: 'Cooking' (May 30, 2017 at 2:29 AM, 1.8 MB), 'Dad's Birthday' (16 items), 'Fish' (May 30, 2017 at 2:27 AM, 832 KB), 'Flowers' (May 30, 2017 at 2:26 AM, 555 KB), 'Hawaii Vacation' (8 items), 'Landscape' (May 30, 2017 at 2:12 AM, 2.4 MB), and 'Stingray' (May 30, 2017 at 2:00 AM, 453 KB). At the bottom, there are 'Recents' and 'Browse' buttons.

Library

✓ Read, Write, Backup

✗ Delete

[Directory]

✓ Read, Write, Delete, Backup

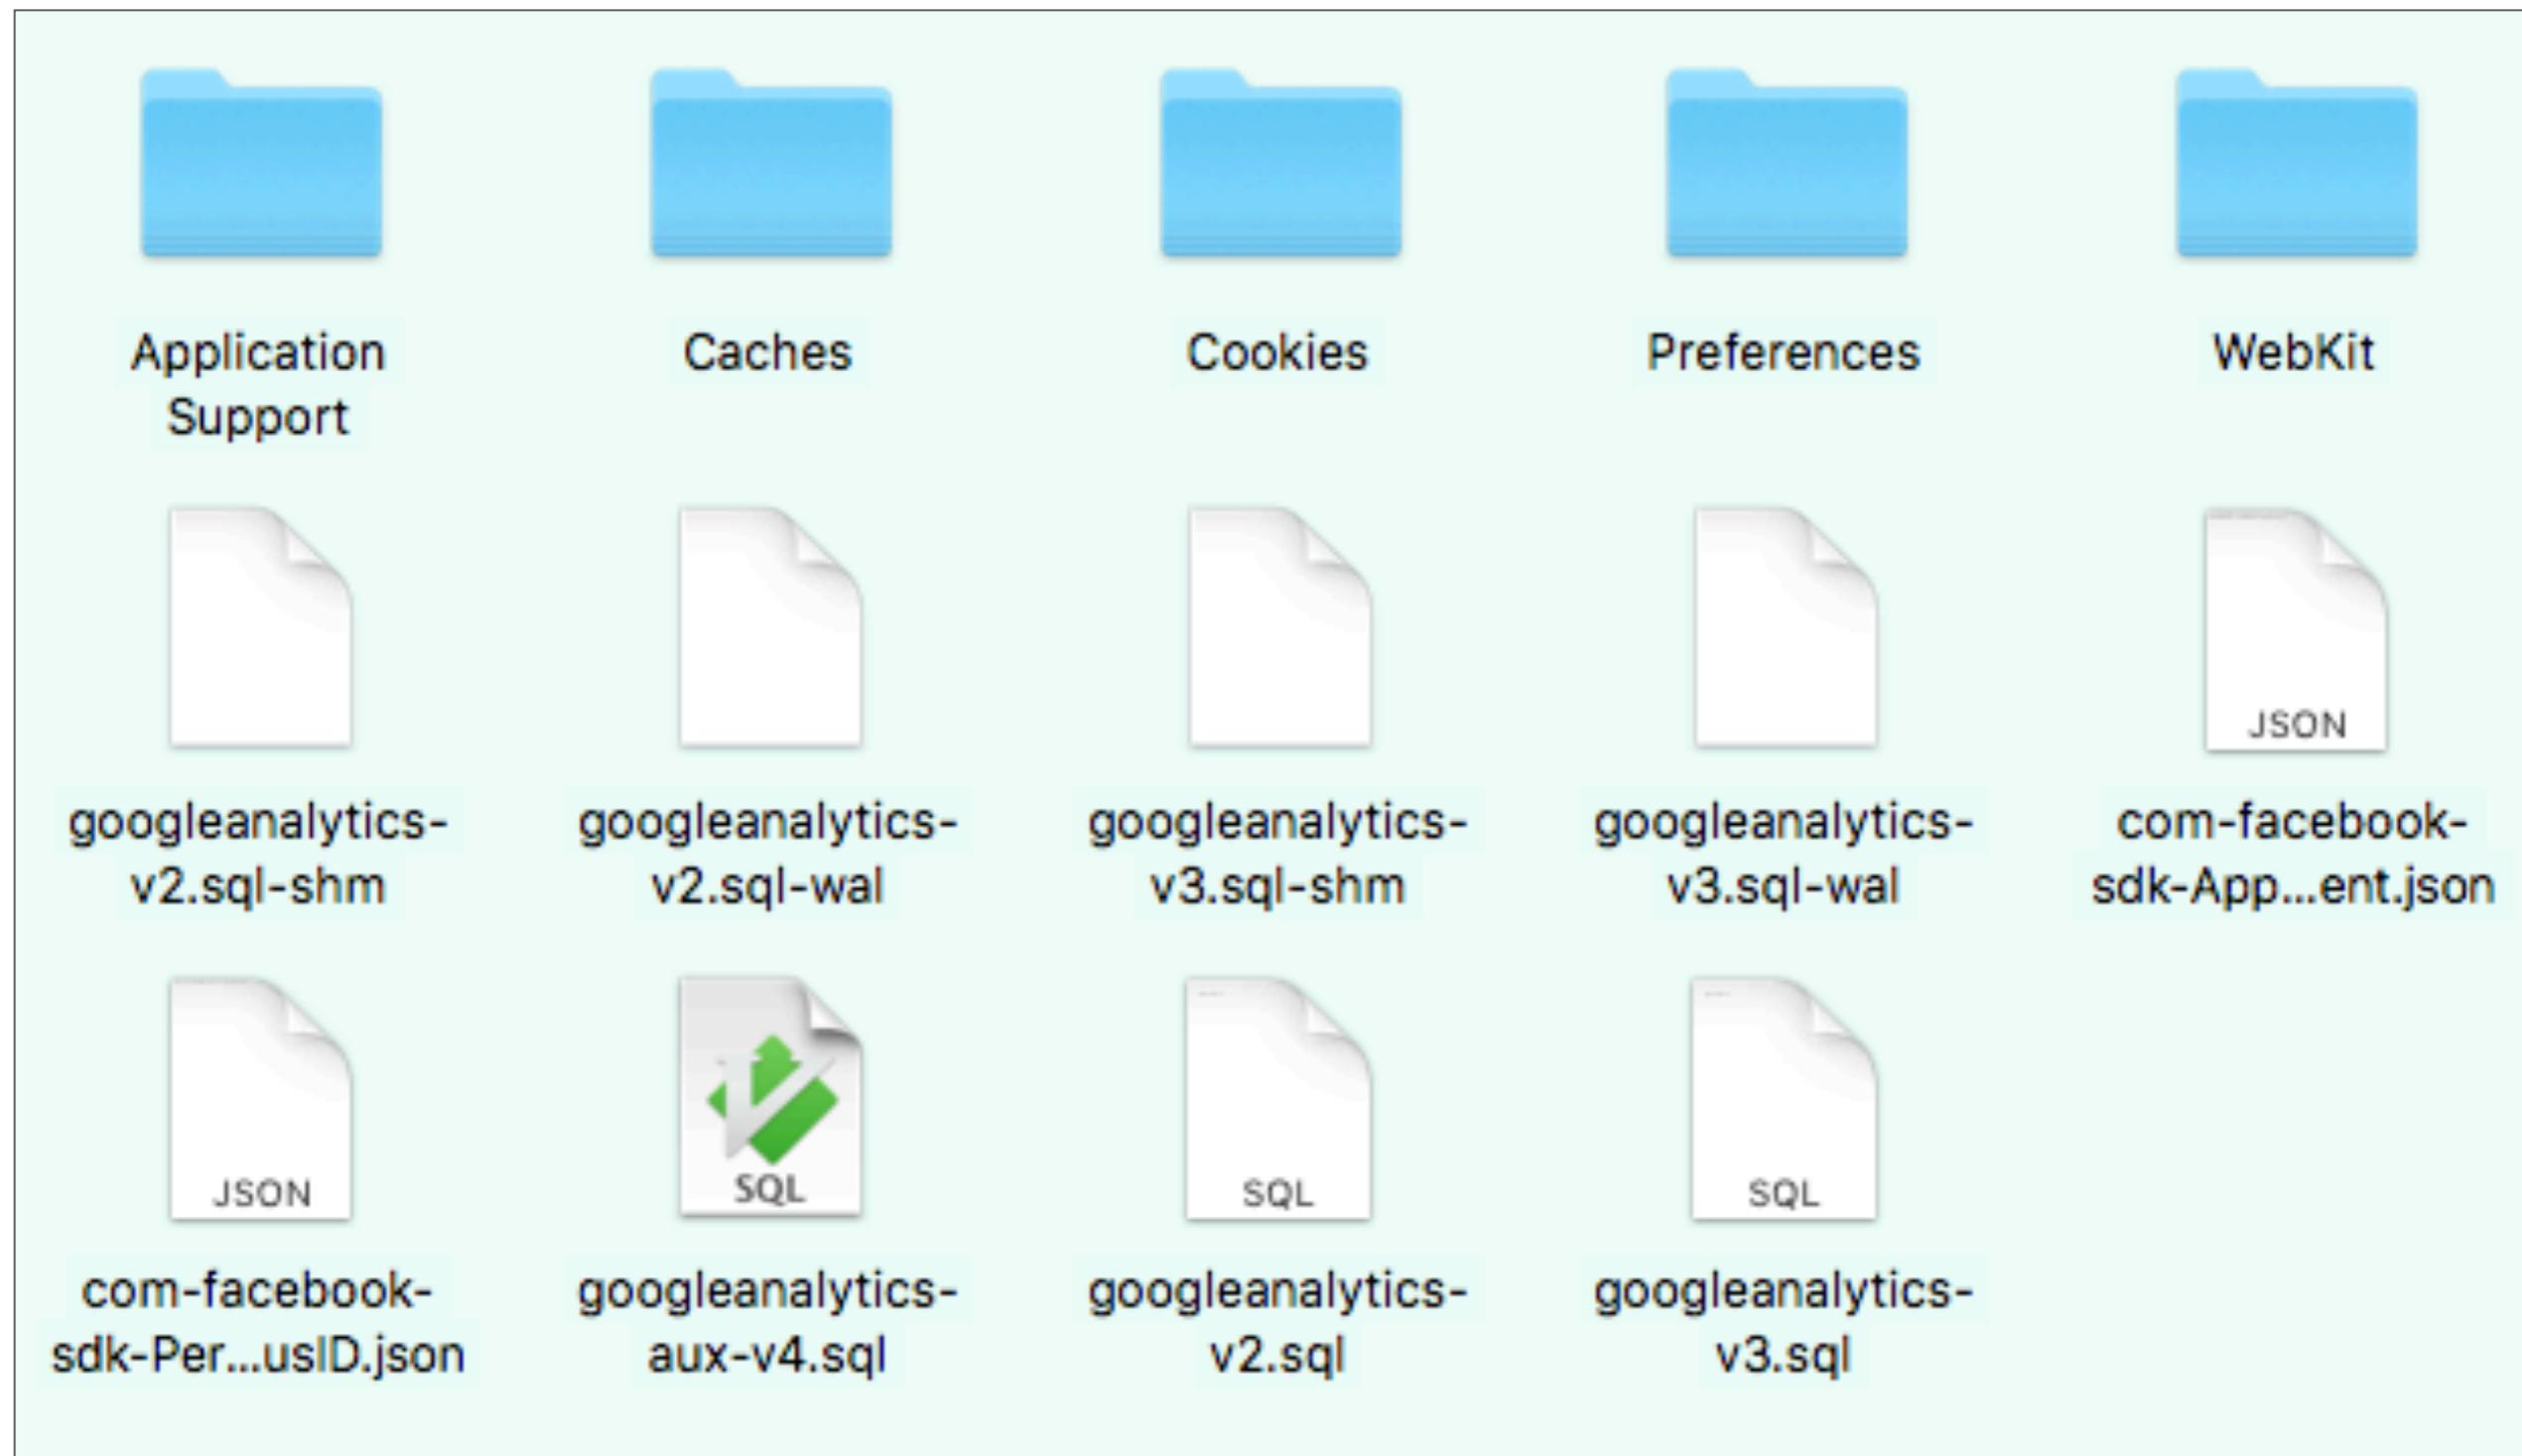

✗

[Files]

- `NSHomeDirectory() + "/Library"`
- `FileManager.default.urls(for: .libraryDirectory, in: .userDomainMask)[0]`
- `NSSearchPathForDirectoriesInDomains(.libraryDirectory, .userDomainMask, true)[0]`

- 유저 데이터 파일 및 임시 파일을 제외한 모든 파일들을 관리
- 유저에게 노출되는 것을 피하고 앱의 기능이나 관리에 필요한 파일 저장
- 주로 서브디렉토리인 Application Support 와 Caches 를 이용하지만 커스텀 디렉토리 사용 가능
- Preference, Cookies, Saved Application State, WebKit 등 필요할 때 시스템에서 자동 생성
- iTunes, iCloud 에 백업

Use subdirectory

Library/Application Support

✓ Read, Write, Delete, Backup
✗

[Directory]

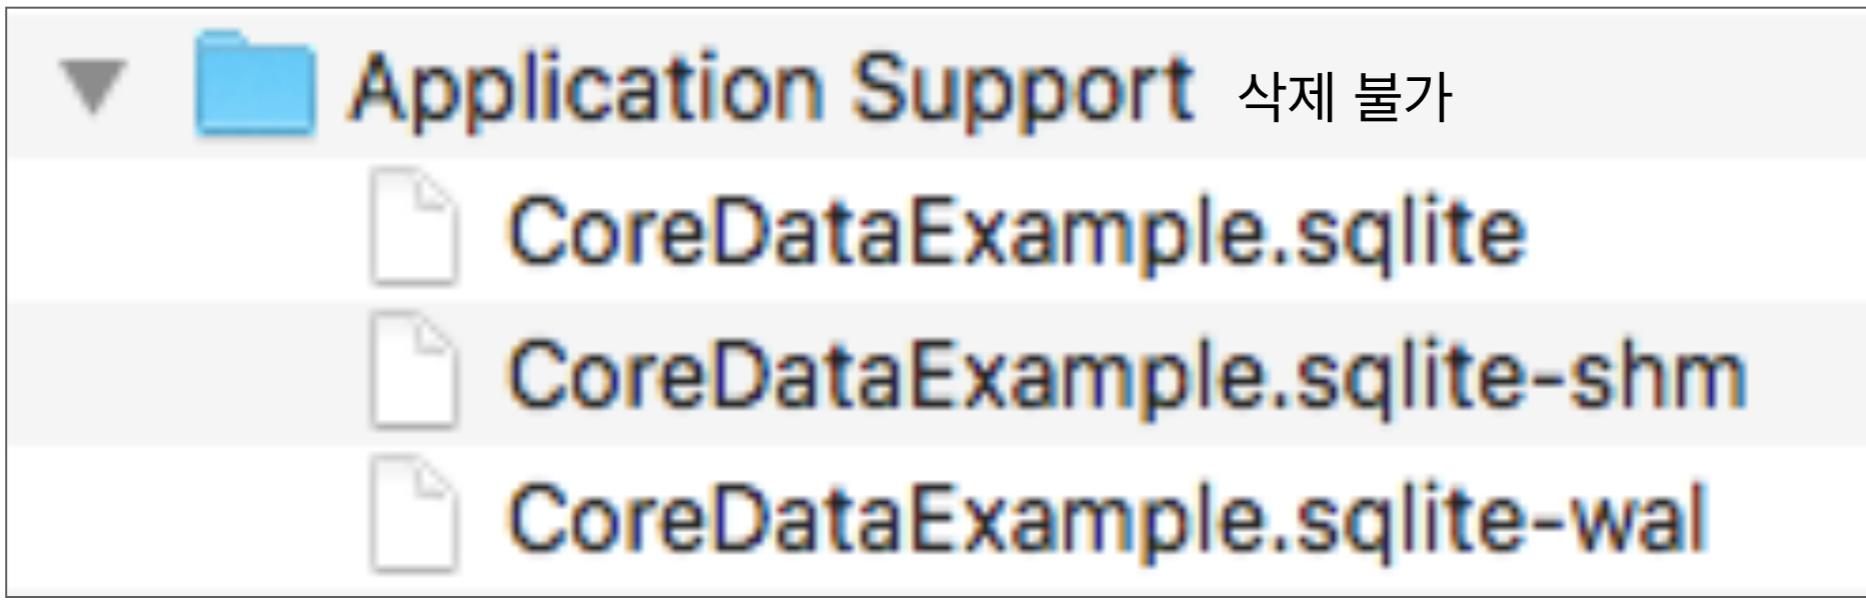

✓ Read, Write, Delete, Backup
✗

[Files]

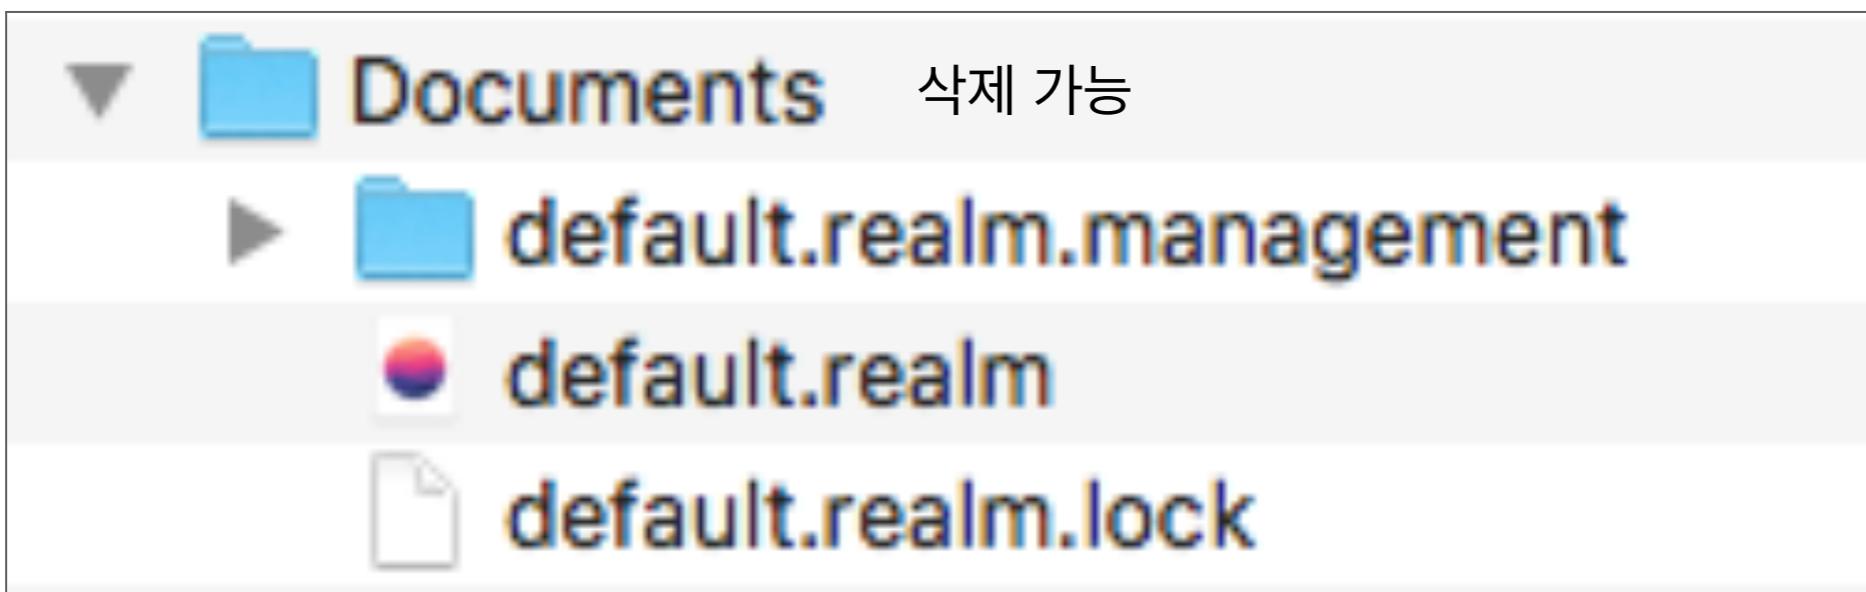

- `FileManager.default.urls(for: .applicationSupportDirectory, in: .userDomainMask)[0]`
- `NSSearchPathForDirectoriesInDomains(.applicationSupportDirectory, .userDomainMask, true)[0]`

- 앱의 기능 또는 관리를 위해 지속적으로 관리해야 되는 파일 저장
- Documents 와 거의 동일한 속성을 지니며, 유저에 대한 노출 여부에 따라 위치 결정
- BundleID 나 회사명 등의 서브디렉토리를 만들어 관리
- CoreData 기본 저장 경로
- iTunes, iCloud 에 백업

Tips

Do not backup attribute

URLResourceKey.isExcludedFromBackupKey (NSURLIsExcludedFromBackupKey)

- 백업 대상에서 제외 + 용량 부족 시에도 삭제 방지
- 디렉토리와 무관하게 적용 가능
- 주기적으로 모니터링하여 필요 없는 파일은 수동 제거 필요
- 백업되는 디렉토리 (Documents, Library) 에 허용되지 않는 파일을 넣었을 경우 리젝되는 것을 방지

```
@discardableResult
func excludeFileFromBackup(at filePath: String) -> Bool {
    var url = URL(fileURLWithPath: filePath)
    do {
        var values = try url.resourceValues(forKeys: [.isExcludedFromBackupKey])
        let isExcluded = values.isExcludedFromBackup ?? false
        guard !isExcluded else { return true }
        values.isExcludedFromBackup = true
        try url.setResourceValues(values)
        return true
    } catch {
        return false
    }
}
```

A User's iCloud Storage Is Limited

- **DO** store the following in iCloud:
 - User documents
 - App-specific files containing user-created data
 - Preferences and app state (using key-value storage, which does not count against a user's iCloud storage allotment)
 - Change log files for a SQLite database (a SQLite database's store file must never be stored in iCloud)
- **DO NOT** store the following in iCloud:
 - Cache files
 - Temporary files
 - App support files that your app creates and can recreate
 - Large downloaded data files

We found that your app does not follow the iOS Data Storage Guidelines, which is required per the App Store Review ...

App Store Review Guidelines

2.23: Apps must follow the iOS Data Storage Guidelines or They Will be rejected

updated, but ...

2.2 Beta Testing

Demos, betas, and trial versions of your app don't belong on the App Store – use TestFlight instead. Any app submitted for beta distribution via TestFlight should be intended for public distribution and should comply with the App Review Guidelines. Note, however, that apps using TestFlight cannot be distributed to testers in exchange for compensation of any kind, including as a reward for crowd-sourced funding. Significant updates to your beta build should be submitted to TestFlight App Review before being distributed to your testers. To learn more, visit the [TestFlight Beta Testing](#).

2.3 Accurate Metadata

Customers should know what they're getting when they download or buy your app, so make sure your app description, screenshots, and previews accurately reflect the app's core experience and remember to keep them up-to-date with new versions.

2.3.1 Don't include any hidden or undocumented features in your app; your app's functionality should be clear to end-users and App Review. Similarly, you should not market your app on the App Store or offline as including content or services that it does not actually offer (e.g. iOS-based virus and malware scanners). Egregious or repeated behavior is grounds for removal from the Developer Program. We work hard to make the App Store a trustworthy ecosystem and expect our app developers to follow suit; if you're dishonest, we don't want to do business with you.

iOS Data Storage Guidelines

Overview

iCloud includes Backup, which automatically backs up a user's iOS device daily over Wi-Fi. Everything in your app's home directory is backed up, with the exception of the application bundle itself, the caches directory, and temp directory. Purchased music, apps, books, the Camera Roll, device settings, home screen and app organization, messages, and ringtones are backed up as well. Because backups are done wirelessly and stored in iCloud for each user, it's best to minimize the amount of data that's stored for your app. Large files will lengthen the time it takes to perform a backup and consume more of a user's available iCloud storage.

Recommendation

- 디스크에 파일을 읽고 쓰는 것은 컴퓨터의 가장 느린 작업 중 하나. 파일 작업 수를 최소화

동일 파일에 대한 다중 작업 - 가능한 그룹화하여 일괄 처리

실제 데이터가 필요할 때까지 Dist I/O 연산 최대한 지연

Recommendation

- 디스크에 파일을 읽고 쓰는 것은 컴퓨터의 가장 느린 작업 중 하나. 파일 작업 수를 최소화
동일 파일에 대한 다중 작업 - 가능한 그룹화하여 일괄 처리
실제 데이터가 필요할 때까지 Dist I/O 연산 최대한 지연
- 메모리에 파일 캐싱 -> 항상 빠른 속도 보장 X
메모리 사용량 증가로 또 다른 성능이 악화될 수 있고 시스템 자체 캐시와 중복 가능성

Recommendation

- 디스크에 파일을 읽고 쓰는 것은 컴퓨터의 가장 느린 작업 중 하나. 파일 작업 수를 최소화
동일 파일에 대한 다중 작업 - 가능한 그룹화하여 일괄 처리
실제 데이터가 필요할 때까지 Dist I/O 연산 최대한 지연
- 메모리에 파일 캐싱 -> 항상 빠른 속도 보장 X
메모리 사용량 증가로 또 다른 성능이 악화될 수 있고 시스템 자체 캐시와 중복 가능성
- URL 객체 - 생성 비용이 크므로 `resourceValuesForKeys(_:)` 를 이용해 캐싱 후 재사용

Recommendation

메모리 사용량 증가로 또 다른 성능이 악화될 수 있고 시스템 자체 캐시와 중복 가능성
- URL 객체 - 생성 비용이 크므로 `resourceValuesForKeys(_:)` 를 이용해 캐싱 후 재사용
- 캐싱 필요없는 데이터 - `Data.ReadingOptions uncached` 적용

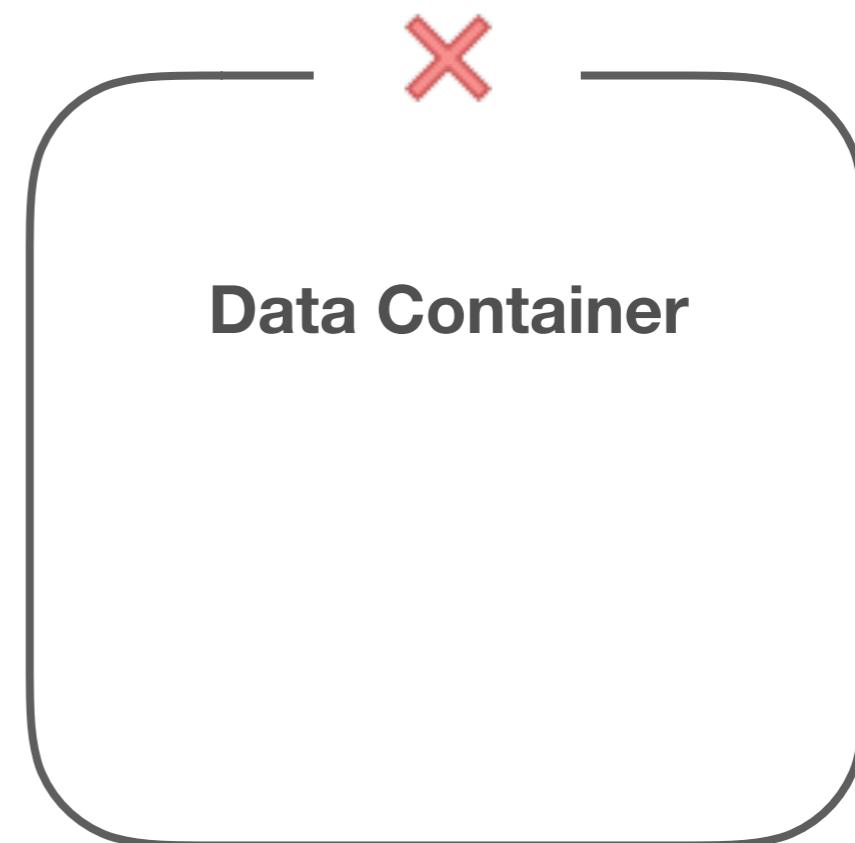

Recommendation

- 디스크에 파일을 읽고 쓰는 것은 컴퓨터의 가장 느린 작업 중 하나. 파일 작업 수를 최소화
 - 동일 파일에 대한 다중 작업 - 가능한 그룹화하여 일괄 처리
 - 실제 데이터가 필요할 때까지 Dist I/O 연산 최대한 지연
 - 메모리에 파일 캐싱 -> 항상 빠른 속도 보장 X
 - 메모리 사용량 증가로 또 다른 성능이 악화될 수 있고 시스템 자체 캐시와 중복 가능성
 - URL 객체 - 생성 비용이 크므로 `resourceValuesForKeys(_:)` 를 이용해 캐싱 후 재사용
 - 캐싱 필요없는 데이터 - `Data.ReadingOptions uncached` 적용
 - 파일 접근 시, String 대신 URL 이용 권장
- e.g.) `func write(to url: URL, atomically useAuxiliaryFile: Bool, encoding enc: UInt) throws`
- `func write(toFile path: String, atomically useAuxiliaryFile: Bool, encoding enc: UInt) throws`

Summary

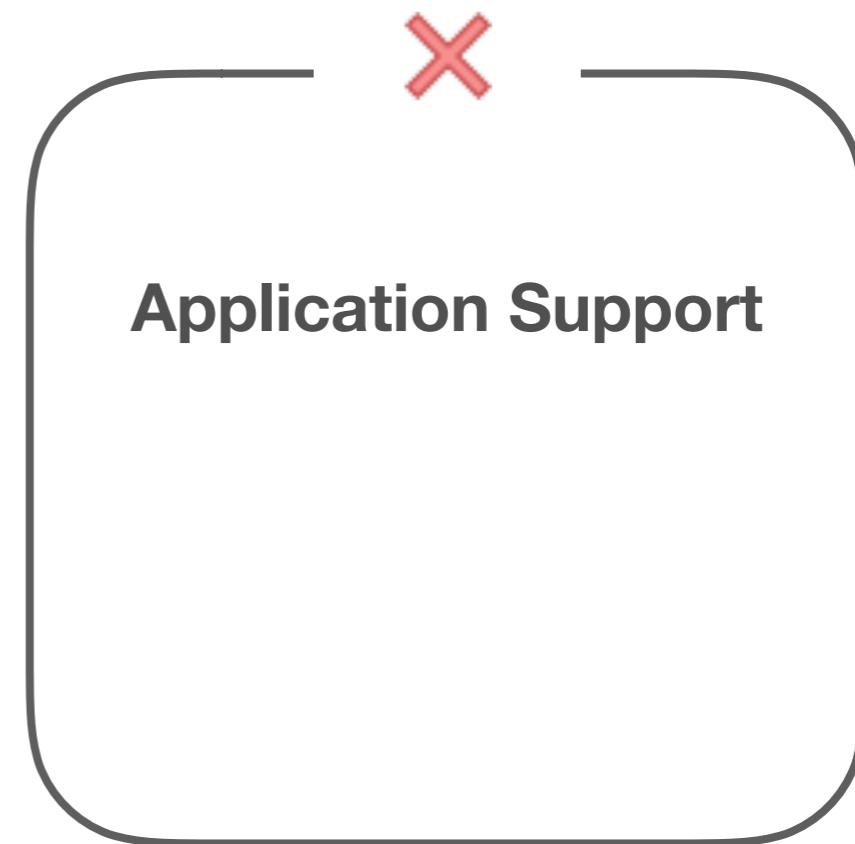

What to use

- 컴파일 타임 파일 생성 여부

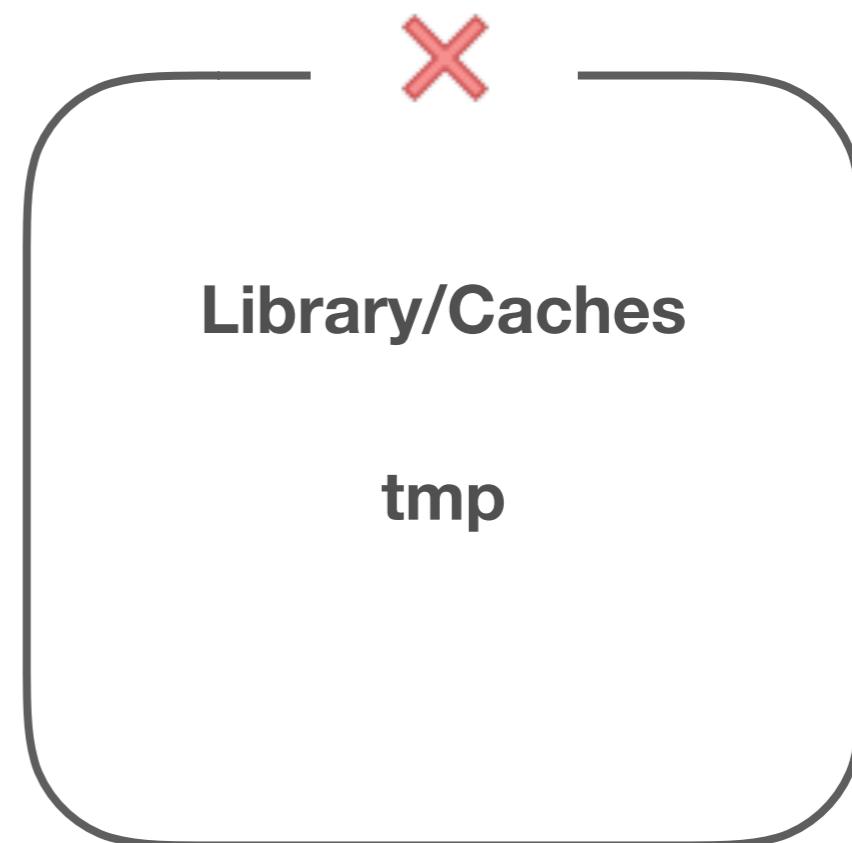

What to use

- 컴파일 타임 파일 생성 여부
- 유저 접근 가능 여부

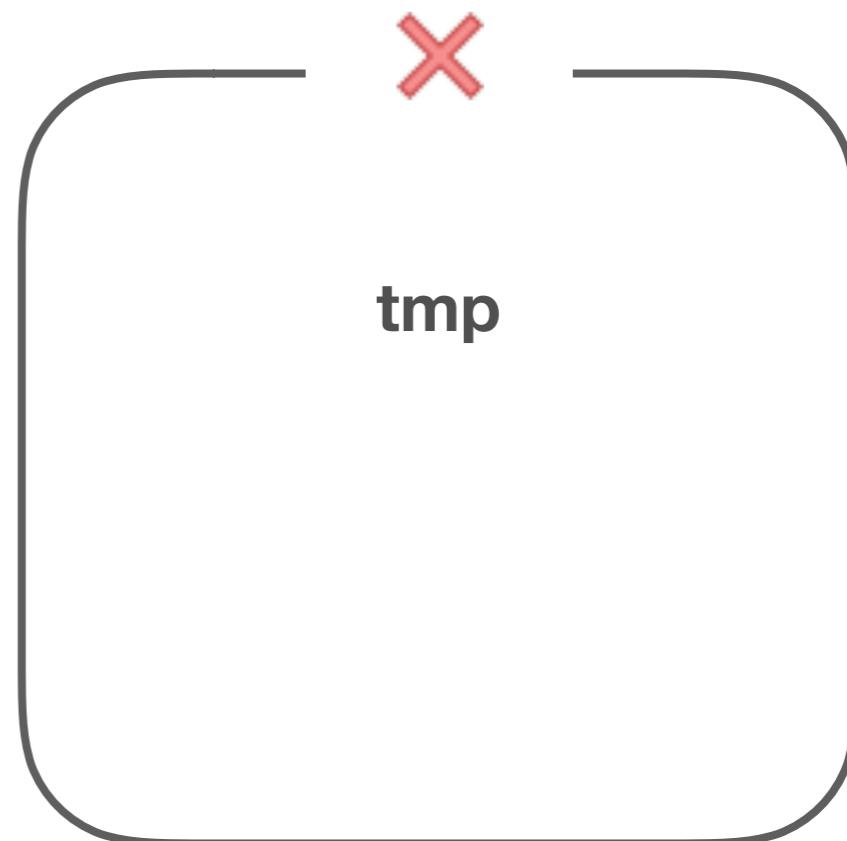

What to use

- 컴파일 타임 파일 생성 여부
- 유저 접근 가능 여부
- 지속성 및 백업 여부

What to use

- 컴파일 타임 파일 생성 여부
- 유저 접근 가능 여부
- 지속성 및 백업 여부
- 앱 런칭 간 데이터 유지 필요 여부

드디어 끝났다 :

End
